ABSTRACT

Reported is a study conducted by the Consortium of Professional Associations for the Study of Special Teacher Improvement Programs (CONPASS) to desess the effectiveness and impact of institutes and other special teacher-training programs, to propose means of improving such programs, and to provide a medium for dialogue among professional associations. Results indicate programs are received overwhelmingly favorable, level of solidarity and morale among participants correlated positively with effectiveness, work assignments are heavy and inversely related to effectiveness, and the program director is extremely important to the effectiveness of individual programs. Preface

This report is based on a study conducted by the Consortium of Professional Associations for the Study of Special Teacher Improvement Programs (CONPASS) for the U.S. Office of Education.

The Consortium was formed in May, 1966, by the American Historical Association, the Association of American Geographers, the Department of Audiovisual Instruction (NEA), the International Reading Association, and the Modern Language Association of America. Invitations were later extended to, and accepted by, the American Economic Association, the American Industrial Arts Association, and the American Political Science Association. Four members at large provide liaison with the arts and humanities, psychological tests and measurement, educational psychology, and teacher education specialists.

The objectives of CONPASS are to provide a coordinated assessment of the effectiveness and impacts of institutes and other special teacher-training programs; to propose means of improving such programs; and to provide a medium for dialogue among the professional associations and leading scholars of the several subject content disciplines and fields represented on its Board. In the past, the Consortium has conducted studies of summer institutes in individual disciplines; it is presently sponsoring an extensive study of the impact of summer institutes in four disciplines upon participants in the institutes.

The present report is on Phase One of the study of the Experienced Teacher Fellowship Program. The study was contracted by CONPASS to Clark University, to be conducted under the supervision of the Consortium Board. The research was initiated by Professors Crockett and Bentley, Professor: Laird participated in the analysis of the results and in the writing of the report. The research staff spent four days in a writing conference in July, 1967, with Drs. John Thompson, Saul Cohen, William Engbretson, Richard Longaker, and Mr. John Cogan; at this conference, the results were studied in detail and the outline of the present report was formulated. Preliminary drafts of the report were examined by the members of the writing conference and by the Executive Committee of the Consortium; the final version of the report has benefitted extensively from their comments.

An advanced edition, without appendixes, was published in October, 1967

1. Intraduction

The Experienced Teacher Fellawship Pragram is a unique and imaginative venture. Its ultimate abjective, and that of twa ather, clasely related pragrams, is ta imprave the quality af education in the nation's elementary and secandary schools. The three programs pursue this abjective in twa ways: by assisting selected, patentially influential teachers ta pursue full-time graduate education in specially planned caurses af study, and by fastering and strengthening an increased cancern for the training af teachers. The Experienced Teacher Fellawship Pragram spansars special pragrams that pravide financial suppart for graduate studies to teachers with field experience. A second program, the Praspective Teacher Fellawship Pragram, supparts similar kinds af programs far individuals who have no teaching experience but who expect to become elementary as secondary school teachers. The third pragram, the Institutional Assistance Grant Program, awards financial grants to strengthen the graduate pragrams far teacher preparation in institutions that have already been awarded either an Experienced at a Praspective Teacher Fellawship Program. The present report summarizes a preliminary study of the Experienced Teacher Fellawship Pragram.

A. The Development of the Experienced Teacher Fellowship Program.

The history of the ExTFP belies the generalization that governmental programs develop slowly. It was authorized under Title V, Part C af the Higher Education Act at 1965. Guidelines for the program were distributed in two letters, dated December 27, 1965, and January 10, 1966. The deadline for mailing campleted proposals was January 20. During the period January 24-26 a panel of consultants evaluated the proposals, and the announcement of awards was made in February. This was barely two manths after the first guideline was sent out. The first students began their study in June, 1966.

Despite the speed with which the pragram was maunted, almast 1,000 proposals were submitted far the academic year 1966-67. Fifty af these proposals were funded, enabling just aver a thausand experienced teachers, from all parts of the cauntry and representing diverse disciplines, to spend a year (in a few programs, twa years) in full-time graduate study.

In its underlying assumptions, the canception of the ExTFP was broad and inclusive. In the guidelines, no limits were suggested as to the range of subject matter that would be supported; no premium was placed an either innovation or traditionalism in educational procedures, and there was no attempt to specify in detail the structure that the graduate programs should adapt. There was, however, the assumption that graduate education is most effective when the courses a student takes are related to one another in a meaningful fashian. The guidelines for ExTFP proposals incorporated this assumption by setting three restrictions an authors of proposals:

First, evidence was required of mare than perfunctory cooperation between subject-matter and teacher-education specialists. All proposals were required to demanstrate that a suitable faculty could be arranged for, campased of members of "teacher education" and

"non-teacher education" departments Further, both the chairman or dean for the substantive aspect of the program and the chairman or dean for teacher education were required to sign the proposal before it was submitted.

Second, institutions were required to adopt an en bloc procedure, by designing a program for the entire group of fifteen to thirty fellows, rather than leaving the individual fellows "to the mercy of the catalogue's cafeteria-like offerings, so often unsuited to the needs of experienced personnel." The en bloc mode of organization was also to provide greater visibility of the program on the campus as well as increased opportunity for fellows to profit from interaction with their peers and from formal instruction by their professors.

Third, the guidelines encouraged cooperation between the institution of higher education and the local school district or system. This was fostered in part by the requirement that fellows be selected jointly by their home educational system and by the college or university concerned. School administrators were required to recommend applicants, and applicants were expected to return to the school systems from which they came. In addition, in order to confront the realities of teaching in schools, cooperation was encouraged between colleges and local school systems, to provide a meaningful practicum experience for the participants.

The fifty programs that were funded were held in forty-seven different colleges and universities. Programs were conducted in 17 different disciplines, ranging from general fields of education (elementary education, teaching the disadvantaged, and counseling and guidance) through the traditional liberal arts disciplines, and including specialized areas such as health education, the school library, and educational media. The fellows were drawn from every part of the country and from schools which served every economic level. Their educational assignments ranged from preschool to high school. A listing of programs is presented in Appendix A.

B. Evaluation of the Experienced Teacher Fellowship Program

1. Three Projected Evaluation Studies

Just as the ExTFP was planned and instituted with considerable speed, so, also, were the procedures for studying the program's effectiveness. Barely three months elapsed between the formation of a research team and completion of data collection for the present report. During that time, a plan has taken form which foresees a series of three related investigations of the effectiveness of the ExTFP: a questionnaire study of responses to the first year's program; during the second year, a field investigation of the operation of the ExTFP in three different institutions; and, in the third year, another study of the entire set of institutions then involved in the ExTFP. Each successive investigation will build on the results obtained by those preceding.

The first of these studies, based on questionnaires and visits by teams to selected programs, will be described at length below. The intensive pilot study of three individual programs will be carried out during the academic year 1967-68; it will involve repeated interviews with participants and faculty in each institution and the periodic administration

of questiannaires and other tests. The extensive body of information that will be obtained will permit an ocquaintance in depth with the operation of these three institutions, making it possible to identify factors that appear to account for the effects the programs have upon the fellows, the faculty, and the institution. An important aspect of this second study will be interviews with the fellows after they have returned to their home schools in 1968-69. The third investigation, to be initiated during the academic year 1968-69, will be an extensive study of all the Experienced Teacher Fellowship Programs then in operation, using self-report measures, interviews, and observations, all developed out of earlier research experiences.

2.' The Procedures Used in the Present Investigation

The present report rests upon two kinds of data: responses to questionnaires that were administered to the individuals who were actually involved in the program, and reports by teams of evaluators who visited 31 of the 50 programs.

Four questionnaires were constructed for administration to those involved in the programs. Each questionnaire borrowed heavily from those used in earlier studies of summer institutes. One questionnaire, containing some 60 different items, was administred to the fellows at the institutions they attended, under conditions which assured anonymity. Completed questionnaires were obtained from 940 of the 1,004 fellows, representing 49 of the 50 institutions. This questionnaire is presented in Appendix B.

The director at each institution was asked to supply the names of the full-time and part-time staff of his program. A copy of a second questionnaire, about equal in length to the student questionnaire, was then mailed to every full-time faculty member and to five randomly-selected part-time faculty members on each campus. Completed questionnaires were obtained from 187 faculty members, in 47 different institutions. This questionnaire is reproduced in Appendix C.

A third questionnaire, sent to the director at each institution, was identical to the faculty questionnaire except that it contained an additional set of ten items concerning the administration of the program. Of the 50 directors, 45 returned these questionnaires in time for analysis in the present report. This questionnaire is presented in Appendix D.

The fourth questionnaire, intended to assess the impact of the program upon the existing teacher-education procedures at the institutions, was sent to the director of teacher education on each campus. Response to this questionnaire was spotty; for this reason, these replies will not be discussed in detail in this report.

¹ Questionnaires were not received from the program in Social Studies at the University of Minnesota.

The evaluation teams, which visited 31 of the 50 programs, normally consisted of three persons- a specialist in the subject matter of the institute, a specialist in teacher education, and a teacher experienced in the relevant subject matter. 1 Some 85 members of these evaluation teams met in early April with the research team, members of CØNPASS, and representatives from the Office of Education for a discussion of the evaluation rating scale and of the procedure that was to be followed in the evaluation visit. They then spent two days on the campuses to which they were assigned, meeting with faculty, students, and administrators, visiting classes, and reviewing the general operation of the programs. Subsequently, each team member individually completed a Visitors Evaluation Form, containing 24 different items. For each item, the evaluator rated the program on a 7-point scale, and then was asked to provide a written analysis of that aspect of the program's operation in explanation of his rating. In addition to the individual reports, the team members submitted a combined evaluation on each item of the evaluation form; this last report represented the consensus of all the team members. A list of evaluation teams and the institutions they visited is presented in Appendix E; Appendix F presents the Visitors Evaluation Form.,

Because of difficulties in scheduling members of evaluation teams, three institutions, were visited by teams of only two members, at two institutions, the team contained four members

II. An Overview of the Results

In the following chapters a detailed report will be made of the results of this study. The purpose of the present chapter is to point out the highlights of these results.

For the most part, the fellows who took part in the program, were relatively young teachers. Their ability and motivation were apparently very high. According to program directors and faculty members, the fellows were at least equal, if not superior, to regular graduate students in motivation and quality of work. The educational attainments and experience of faculty members also suggest that teachers in the program were well qualified. Thus, the great majority of the fifty programs possessed the two principal qualifications for an effective academic program: an able, highly motivated student body and a capable, concerned faculty.

The general correlates of effectiveness and the extent to which the Program's potential effectiveness was realized are summarized in the following generalizations. The specific results on which the generalizations are based are contained in subsequent sections of the report.

1. The reaction to the Program by program directors, faculty members, fallows, and evaluation teams was overwhelmingly favorable.

As a general rule, the extent of a source's enthusiasm about the Program varied with that source's degree of professional investment in it: directors' respanses were usually more favorable than those by faculty members, faculty members were more favorable than fellows, and fellows more favorable than evaluators. But this general rule held within a context of over-all favorableness toward the program. Specific evidence of the widespread approval that was generated may be found throughout the results. The extent of this approval may be illustrated by the fact that 82% of the fellows reported that their own, program was either usually stimulating and interesting or stimulating and interesting throughout. Responses by faculty members and program directors to the identical item were even more favorable. Similarly, the majority of respondents in each of the four roles — directors, faculty members, fellows, and evaluators — reported that the Program had clearly met the educational needs of the fellows. Even the few evaluation teams which were sharply critical of an individual program took care to comment favorably on the over-all concept of the ExTFP.

There was, of course, a considerable variation among institutions in the evaluations that were received: some programs were given extremely high ratings, a few received relatively low evaluations. It must be stressed again, however, that this variation took place around an average value that was very favorable, indeed.

2. Although there was a high degree of solidarity and morale among fellows in the average program, the level of solidarity and morale correlated positively with judgments of reffectiveness.

Again, there was considerable variation in the level of morale and solidarity that characterized the different institutions. Eyes so, the average program received high ratings on morale and solidarity from directors, faculty members, fellows, and evaluators. Beyond this, there were consistent this introductions between estimates of solidarity and morale and judgments of the effectiveness of individual programs: programs where morale and solidarity were high also received high ratings on effectiveness and participant satisfaction; when morale and solidarity were low, so were ratings of satisfaction and effectiveness.

3. The amount of work assigned was heavy, and inversely related to effectiveness and satisfaction.

Of the 31 evaluation teams, none said the fellows' wark load was too light, while 21 said it was in some degree too heavy; of 940 fellows, only 6 said the load was too light, and 440 said it was "too heavy to allow completion of assignments and independent work."

Of particular interest was the inverse relationship between fellows' and evaluators' judgments on this question and the various measures of satisfaction and effectiveness: institutions where the amount of work received was judged to be inordinately high were consistently ranked as relatively ineffectived. It should be noted that this relationship held, for the absolute amount of work that was required, not for the amount of competitiveness that was fostered between fellows. In the average program, fellows reported a fairly large amount of competition with one another; however, these latter ratings did not relate consistently either to judgments of the over-all work load or to ratings of effectiveness and satisfaction.

4. Respondents in different roles disagreed as to whether the programs were built upon the extensive backgrounds of the fellows. Judgments by fellows and evaluators on this question correlated positively, however, with measure of effectiveness.

Almost all of the program directors and a large majority of the faculty reported that the curriculum at their institution utilized and built upon the experience of the fellows; most of the evaluation teams indicated the reverse; answers by the fellows to this question were intermediate, but more similar to the faculty's than to the evaluators'. Despite their disagreement in the level at which they felt the fellows' experience was utilized, evaluation teams and fellows agreed in their rankings of institutions on their echievement of this goal. Furthermore, those programs which, according to fellows and evaluators, managed somehow to build upon the fellows' experience received more favorable ratings on program effectiveness than those which did not.

5. Respondents in different roles disagreed as to the extent of cooperation among programs and the amount of innovation in the programs. Although departmental cooperation was correlated with program effect Veness, this was not true of innovation.

For the most part, directors and faculty members involved in the Program reported that

cooperation among different departments was good, that the Program had considerable effects on teacher-education procedures, and that it contributed to the plans for development of the department and institution conterned. Evaluation teams did not make such favorable judgments. Although in some institutions evaluators said that the Program had affected interdepartmental cooperation, teacher training, or departmental development, in as many other institutions evaluators felt that it had little effect on such policies. It seems likely that the evaluators, judgments were somewhat closer to reality than those of the directors and faculty; that within the few months of the Program's operation it had effected few, if any really substantial changes in the structure of most of the host institutions. It is worth noting, however, that there was a positive correlation between judgments of program effectiveness on the one hand and, on the other, reports by evaluators and by fellows of effective interdepartmental cooperation.

As with judgments of effects upon host institutions, program directors and faculty members were much more likely than evaluators to report that their international introduced imaginative innovations. Again it is likely that the evaluators! judgment were more objective than those by the other two groups, and that as many programs introduced few educational innovations as introduced many. It is moteworthy that evaluator estimates of the extent of innovations was uncorrelated with judgments of program effectiveness.

As adequate a summary as any of the effects of the Program upon the host institution can be given by quoting from an interim report on this project, written & May, 1967:

The Programs appear to have been least effective in overcoming the traditional patterns of organization in colleges and universities. Thus, the most common complaints by evaluation teams dealt with the similarity of these programs to traditional undergraduate and graduate education, the imposition of a common body of required courses upon all participants, the failure to adjust the curriculum to the needs of individual students, the absence of true collaboration Between different departments of the same institution, or the nconcern of the stoff for the response to the Program of the fellows as a groups. All of these complaints are commonly woiced throughout higher education in America, they are not unique to the Experienced Teachers Fellowship Program. It is significant that a considerable number of institutions. were adjudged to provide for their fellows an unusual and rewarding educational experience, some by following traditional educational patterns, other by breaking with tradition and establishing novel and exciting educational procedures.

6. The program director has an extremely important role in determining the effectiveness of individual programs.

A partial enumeration of the functions that a program director performs yields a list of impressive length. He should be directly involved in deciding upon the course content and the mode of organization of the program, he must make sure that the formal courses and

the supplemental activities are coordinated, must arrange for the presence of whatever educational materials are required, must encourage informal exchanges among fellows and between fellows and staff, must try to mediate in disputes that may develop among participants, must ascertain the fellows' and the faculty's views and criticisms of the program and its effectiveness, must decide whether changes in procedures or content are required, and, when the decision is affirmative, must determine what changes to make in the program and how to make them. In a program whose success relies in good part upon the establishment of high esprit decorps among participants and upon the group's performance establishment of high esprit decorps among participants and upon the group's performance some programs which run smoothly from beginning to end, never requiring the mediating influence of a skillful administrator. In the typical institution, however, at some time during the year crises arise, interests conflict, difficulties occur which require effective administrative action. At such times it is essential that the program director possess the ability, the time, and especially, the institutional power to respond effectively to the demands of the situation.

III. The Population and the Programs

We have already remarked that the ExTFP embraced a wide variety of offerings. Programs varied as to types of institutions that were involved, the geographic region where the institutions were located, the characteristics of fellows enrolled, and the subject matter that was offered. Beyond this, they differed remarkably in the pedagogical strategies that were adopted. Some programs were innovative, others were traditional. Some programs strove for competitiveness among fellows, while others sought a non-competitive atmosphere. Certain programs maintained formal relationships between fellows and faculty, but others were more informal. The programs and the individuals involved in them differed in these general ways and in all other ways in which people differ. Our purpose in this section of the report is to summarize some of the characteristics of the fellows, the faculty, and the programs. In succeeding sections, we shall discuss reactions to these programs, and shall look for variables that correlated with their effectiveness. It may sometimes appear that the differences among programs are obscured in the course of this analysis, that diversity is reduced to uniformity. If so, the reader should bear in mind that we are seeking for whatever underlying constancy there may be beneath the remarkable surface diversity.

A. Characteristics of the Participants

- Personal Characteristics

In certain of their personal charocteristics the group of fellows was not entirely representative of teachers as a whole. Men made up 51% of the group, no doubt a higher proportion than obtains among teachers in general. In addition, the graup was relatively young, with 79% being younger than 40 and 28% younger than 30. Despite their relative youth, the participants were not inexperienced in teaching. Ninety-two percent reported three or more years of experience in education, 59% had six or more years of experience; however, only 24% had ten or more years of experience. The participants experience spanned all levels of elementary and secondary education: 32% had been principally involved at the high school level, 21% at the junior high school level, 45% at the elementary level, and 2.6% in preschool or kindergarten teaching.

Apparently, the fellows' considerable experience and training had not been primarily in the subject matter areas of their respective programs, for sixty-one percent had worked as "specialists" in their areas for less than 3 years, while only 28% reported taking as many as 30 semester hours of undergraduate credit in their specialty — the presumed equivalent of on undergraduate mojor. Seventy percent had taken fewer than 10 hours of graduate credit in their special area, and o third reported no graduate courses et all in that area. Two thirds had never attended an NDEA summer institute or similar training program, and only a tenth had attended more than one such program.

It is nateworthy that only 3% of the participants had held administrative jobs when they entered the program. Of those not in administrative positions, 55% said they "probably" or "definitely" would not go into full-time educational administration, while only 6% said they definitely expected to do so. Upon completion of the program, these fellows will doubtless be in a favored position on the promotional ladder of their home school systems; their apparent reluctance to move into administrative positions bespeaks a strong commitment to blassroom teaching. It will be important to examine, in future years, actual career patterns of these fellows.

2. Characteristics Fellows' Home Communities and Schools

Fellows were distributed according to the size of the communities they came from in numbers roughly proportionable the distribution in the population as a whole. Thirty-three percent were from communities with less than 2,500 residents, 40% from towns or cities with populations between 2,500 and 100,000, 16% from cities between 100,000 and 500,000 population, and 19% from cities of over 500,000. Only 14% of the fellows identified their school system as being in a suburb or satellife city.

At least some participants came from each part of the country. The Western and Midwestern states were somewhat over-represented, with 24% and 33%, respectively, of all participants; 23% of the fellows were from the North Atlantic states, about the same proportion as in the population at lorge; the Southeastern, South Central, and Southwestern states were somewhat under-represented, comprising only 19% of the total.

As to school enrollment, there were fellows from schools with fewer than 200 students, others from schools with over 2,000; and still others in every category intermediate between these extremes.

Most commonly, fellows reported that their students come from families of middle income. Fomilies with low but steady income were reported next most frequently, and either wealthy families or those in poverty were reportedly a small minority of the clientele of most fellows' schools. Sixty-eight percent reported that the pupils in their home schools were "all or mostly white"; the remainder reported that their pupils were predominantly Spanish-speaking, Indian, Negro, or a combination of two or more ethnic groups. Only about 15% of the school-age children in America are nonwhite; therefore, it appears that the proportion of teachers in the ExTFP who came from classrooms with substantial numbers of nonwhite children was somewhat greater than in the nation as a whole. Since five of the 50 programs were for teachers of the disadvantaged, such an outcome is not surprising.

3. -Ability and Interests of Fellows

No information is ovailable concerning the fellows' performance, on standardized tests of obility. However, there were items on each of the questionnaires which requested

fellows, faculty, and directors to estimate the fellows ability. By all three sets of judgments, the fellows came off extremely well. Thus, 83% of the fellows said that the participants ability was above average and 95% reported that fellows seemed genuinely interested in the subject matter.

with that of their institution's regular raduate students. The results of these comparisons are summarized in Table 1. It is clear that the fellows were viewed very favorably by both sources, with program directors being consistently more favorable than the faculty. Note that more than half the faculty and directors reported that fellows were more industrious, more serious, and had greater initiative than their regular graduate students; nearly as much preference was given to fellows over graduate students in their commitment to the discipline and their ability to communicate. The faculty thought that the two groups were about equal in intellectual ability, while directors favored the fellows; similarly, the faculty rated graduate students somewhat higher than fellows in knowledge of the discipline, while directors' ratings were the reverse. Considering that graduate students constitute a very select group for comparison, these results provide an extremely favorable picture of the fellows' capacities.

Table 1. Comparisons of Fellows with Typical Graduate Students Made by Faculty and Program Directors

-11

It is of interest, as well, to examine what the follows considered to be their greatest problem before enrolling in the ExTFP: They reported as follows:

23%	Using effective teaching methods
20%	Knowledge of the subject matter
% %	Motivating students
14%	Determining what is most important to teach
12%	Handling students of low ability
6%	Knowledge of appropriate materials .
3%	Encouraging and stimulating gifted students

One derives from these data a picture of a young, energetic, serious, industrious group of teachers, with considerable experience and a strong commitment to their work. The communities that the fellows were drawn from seem to be approximately representative of the nation ds a whole except, perhaps, that the South was somewhat under-represented and that schools with substantial numbers of nonwhite students were somewhat over-represented. The fact that fellows were relatively untrained in the specialized subject matter of their programs, combined with their intellectual ability and their sincerity of purpose, suggests that they were especially likely to benefit from their graduate work.

B. Characteristics of the Faculty

The educational and professional background of faculty members in the EXTFP was impressive. Seventy-three percent held either the Ph.D. or the Ed.D. degree; 80% had taught at the college level for three or more years, 60% for six or more years, and 25% for more than 16 years. In addition, 37% had taught for at least a year in elementary school and 51% had a year of more of experience at the secondary level. Thus, many of the faculty were acquainted at first hand with the educational settings from which the participants came and for which they were being trained.

Two sets of questions bear on the quality of instruction at the different institutions, one set from the evaluation teams, the other from the fellows. When asked to comment on the qualifications of the teaching staff, 28 of the 31 evaluation teams rated them on the "qualified" side of the continuum, two placed their ratings at the midpoint, and only one team rated the staff as slightly unqualified.

The fellows' ratings of the faculty are similar to those that would be given by college students in a course that was somewhat better than average. Thus, over two-thirds of the fellows rated the quality of lectures as good or excellent; 56% gave the same evaluation to seminars and structured discussions. The great majority of fellows said that the lectures were seldom or never over their heads (a response which might, in fact, be either positive or negative), that the instructors did not talk down to them, and that the lectures dealt with various approaches to the subject. However, 41% believed that lectures were sometimes or usually dominated by detail or unrelated facts, and a slight majority

(51%) reported that the faculty had little or no knowledge of the practical problems of school teachers. It should be noted that this last opinion does not wholly square with the faculty members' reports of their own background in elementary and secondary school teaching.

In sum, the instructors at the various institutions seem to have been quite well qualified. Reactions of fellows to the teaching were mixed, although on the positive side. The response to lectures and seminars as quite positive; on the other hand, there was some feeling -- based, perhaps, on the academic nature of most programs and on the fellows' concern about the material's applicability in the classroom -- that not enough attention was given to the "practical" problems of teachers.

C. Characteristics of the Programs

The guidelines for proposals for the EXTFP emphasized en bloc programming, cooperation between education and subject-matter departments, and attention to the special character and experience of the participants. These requirements demanded of program planners a type of co-ordination that may not have been in effect at many institutions. Although the guidelines specifically stated that educational innovation was not a requirement for proposals, in fact file proposals which were funded were novel and extremely diverse. It is this diversity which is most characteristic of the group of programs as a whole. Of the 50 programs, the largest number whose titles were approximately similar is four, and there seem to be 24 different kinds of programs indicated by the titles alone. Actually, accept for the structural uniformities called for by the guidelines, there was little similarity between any two programs on more than a few dimensions. The dimensions along which programs varied may conveniently be divided into two classes, (1) organizational and situational characteristics and (2) goals and rationale.

Organizational and situational characteristics. The vast majority (84%) of the programs were situated, geographically, in one of three areas, the Midwest (38%), West (25%) or Northeast (21%). The remaining 16% of the programs were scattered across the Southeast, South Central, and Southwest regions &

The programs ranged in size from 5 to 25 participants, with 25 the most common number (34%), followed by 20 (28%) and 15 (20%). Only two programs had a participant group of 5 or fewer. The guidelines specified there should be cooperation between education and subject matter departments, but in every case one department bore primary responsibility as "home" for the program. The programs were approximately equally divided in their locations, with 29 programs based in education departments and 21 based in other departments.

One reason for the novelty and diversity among the 50 programs that were actually funded may be that the advisory panels used innovation and diversity as criteria in deciding which proposals to recommend for approval or disapproval, even though these criteria were not specifically set forth in the guidelines.

Great latitude was permitted to institutions in the actual functioning of the programs. For instance, many awarded an MA degree at the completion of the program, others provided the possibility of an MA upon completion of some further work, and some made no provision for an advanced degree at all. Among those awarding an MA degree, some required a thesis, most did not. The choices of teaching techniques were related to the goals of the programs, but again there were great variations among programs with apparently similar goals. Some programs, particularly those whose purpose seemed to be to upgrade and educate teachers in existing areas such as History or Mathematics, provided a menu of conventional courses from which participants selected, much as in a conventional MA program. Others, particularly those programs which reportedly they were training for a "new" kind of function, such as media consultant or teacher of the disadvantaged, provided a real "bloc" of courses identical for each participant, and often very different from any courses traught elsewhere in the institution. Seminars, workshops and practica were in general more common in the latter programs than in conventional graduale sequences.

As to the goals which programs pursued, their diversity has already been mentioned. Programs ranged from fairly conventional, though certainly important, attempts to upgrade the content, knowledge, and techniques of teachers of English, History, or Geography to the creation of a "unique person in the educational setting" such as a centralized media specialist or an educational systems analyst. There were five programs to train teachers of different disadvantaged groups, including rural Alaskan Indians, Texas Mexican-Americans, and Harlem Negroes.

in 18 programs the principal emphasis was on secondary school teachers, in 17 the emphasis was at the primary level, and at least four covered both levels. In addition, there were 10 programs for the training of coordinating or advisory personnel, such as goldance counselors, media specialists and school librarians.

IV: A Profile of Reactions to the Program.

This section of the report will consider reactions to the Program by fellows, faculty members, directors, and evaluators. It begins with the degree of satisfaction that was expressed, then proceeds to various judgments of the Program's effectiveness. A discussion then follows of how and whether the various programs implemented the three requirements regarding program structure that were spelled out in the guidelines: the importance of an en bloc approach, the necessity for subject-matter and teacher education departments to work closely with each other, and the requirement that relationships be established with the local school systems. Finally, we will discuss what might be called the "structory of operation" adopted by the different programs, including the extent to which the programs made use of the extensive experience of the fellows, the amount of competitiveness that was fostered among fellows, their work load, the extent of faculty involvement in the program, and the amount of innovation in the cyrriculum.

\$A. Satisfaction and Effectiveness /

It is not easy to differentiate between a person's satisfaction with an educational program and his judgments of its effectiveness. Presumably, the two kinds of responses should vary with one another, and, as we shall see in the next section, they do co-vary to a remarkable degree. Nevertheless, the distinction seems worthwhile ince satisfaction with a program refers to one's overall emotional response, whereas effectiveness is judged according to achievement of goals by the respondent. Thus, a program might conceivably be effective without necessarily producing high levels of satisfaction among the participants, and vice versa. We consider, first, the extent of satisfaction with the ExTFP, then judgments of its effectiveness.

1. Satisfaction With the Program,

Two questions which appear to reflect satisfaction with the ExTFP were included in substantially the some form in the questionnaires given to the fellows, to the faculty, and to the directors. One of these deals directly with reactions to the Program:

Which of the following alternatives best describes your reaction to the

Experie	nced Teacher Pellowship Program?
•	It was a stimulating and interesting experience throughout.
*	It was usually stimulating and interesting.
	It was only occasionally stimulating and interesting.
	It was seldom or never stimulating and interesting

"A" comparison of the responses of the three groups is given in Table 2. Clearly, the reaction in every group was overwhelmingly favorable, with faculty members somewhat more favorable than fellows, and directors the most favorable of all. It should be under-

tined that among even the least enthusiastic group, the fellows in the program, 82% reported that the ExTFP was either usually stimulating and interesting or stimulating and interesting throughout.

Table 2. Ratings by Faculty, Directors, and Fellows of How Stimulating and Interesting
They Found the Program

	Percent Saying ExTFP Was Stimulating and Interesting						
Source \	Throughout	Usually	Occasionally	Seldom or Never			
Faculty	. 42	. 46	8	1			
Directors	60	38	2	0 ′			
Fellows	32 .	50	16	1 -			

The second item that may be considered a measure of satisfaction asked faculty and fellows for a comparison of the Program with a typical eight-week summer institute. Faculty members and directors who had taught in such programs, but not those who had not, were asked to compare the ExTFP with NDEA or NSF academic year or summer institutes. Since fellows had earlier reported whether they had ever attended such institutes, it was possible to divide them into two groups: those with and those without prior institute experience. The four sets of comparisons of the ExTFP with other institutes are presented in Table 3.

Again, if is evident that the response to the ExTFP was overwhelmingly favorable. On this item, the fellows were more likely than the other two groups to view the ExTFP as superior to other institutes, and those who had not taken part in such institutes were somewhat more favorable than those who had. Again, the directors showed somewhat greater approval of the ExTFP than did the faculty. Of greater importance than these inter-group comparisons, however, is the fact that only a tiny fraction of the respondents in any group felt that other kinds of institutes were superior to the ExTFP.

It must be emphasized that these judgments are almost certainly expressions of satisfaction with the ExTFP instead of a true reflection of the relative effectiveness of that Program and other institutes. Many factors were involved in these responses: fellows in the ExTFP had committed a full year or longer to that program; their stipends were larger than those paid in the summer institutes and they extended over a full year instead of eight weeks; many of the ExTFP fellows were receiving advanced degrees or credit toward such degrees. In short, ExTFP fellows and staff were comparing a present valued experience to a distant one; their comparisons can hardly be considered unbiased judgments of effectiveness; as expressions of satisfaction, however, the results are impressive.

2. Judgments of Program Effectiveness

Unfortunately, the questionnaire method does not provide a fully satisfactory means of determining the effectiveness of an educational program. Subjective ratings can, provide, at best, imperfect estimate of what a student has learned from a set of material or of how well his new knowledge will be applied when he returns to his earlier role. Whether a student has profited a little or a great deal from a program should be assessed by comparing what he knows at the program's end with what he knew at its beginning; similarly, whether he will apply what he has learned can be determined adequately only by observing his performance on his home grounds. Nevertheless, in the absence of more reliable measures of prógram effectiveness; the subjective ratings that are obtained in questionnaires are considerably better than no estimates of effectiveness at all. Especially when the respondents are experienced judges of the effectiveness of educational programs -- and such is certainly the case in the present study -- one can expect their replies to the questionnaire to relate positively, if imperfectly, to more-objective measures of program effectiveness. With the material at hand, we have no choice but to use questionnaire ratings of effectiveness. We cannot estimate the degree to which these ratings correspond to the "true" effectiveness of the different programs; nevertheless, we can reasonably assume that there is considerable validity in these judgments.

There was only one question relating to effectiveness which asked for approximately the same kind of judgment from faculty, directors, fellows, and evaluators. The form the question took varied considerably from one questionnaire to another. In the faculty and director questionnaires, respondents were asked: "In your opinion, were the educational needs of the participants met by the program?" Fellows were first asked to check, from among seven different teaching problems, the one that had concerned them most before they enrolled in the EXTFP. In the next item they were asked: "To what extent did the program this year meet that problem?" Finally, evaluation teams were asked to rate, on a seven-point scale, whether the program seemed to meet the needs of the participants. Responses of the four groups to these items are presented in Table 4.

Table 4. Estimates by Faculty, Directors, Fellows, and Evaluators of Whether the ExTFP Met Fellows' Needs

It is evident that the directors and faculty were both confident that the fellows' educational needs had been met, with the directors, once more, somewhat more positive than the faculty. The confidence of these two groups in the effectiveness of the Program is further revealed by their responses to two other questions. When asked whether the ExTFP resulted in the participants becoming better teachers, 72% of the faculty replied "yes" and 24% were uncertain (presumably for lack of direct observation of the fellows' teaching); the corresponding proportions for directors were 80% and 13%. Similarly, 92% of the faculty and 100% of the directors reported, in another item, that the overall program was either valuable or very valuable for the participants.

It may be seen in Table 4 that 74% of the fellows reported that the program had met their major problem to at least a moderate degree. While this is a substantial majority, it also leaves one fellow in four feeling that his major teaching problem was met to only a slight degree (21%) or not at all (6%). This outcome should not be taken as evidence that one fourth of the fellows thought the program was ineffective. It seems more likely that the ExTFP was not specifically directed at the major teaching problem of many of the fellows. For example, the major problem of 28% of the fellows was either motivating students or handling students of low ability; it is doubtful that most programs focused their instruction on those topics. A related item on the fellows' questionnaire asked them how useful the program had been in preparing them to handle their own teaching situations. Seventy-nine percent reported the program as moderately or extremely useful, 18% as somewhat useful, and only 3% as being of no use at all.

From Table 4 it appears that evaluators were somewhat less impressed with the effectiveness of the programs than were the other three groups. Just over half of the evaluation teams said the institutions they visited had met participants' needs well, while five teams said these needs were less than adequately met. These last five teams of evaluators remarked on the similarity of the programs they visited to regular undergraduate and graduate training, and also on the Tack of adequate practicum experience. A much more favorable view of the programs was expressed in evaluators' judgments of whether ... the fellows would be able to apply what they had learned when they returned to their schools. Twenty-three of the 31 teams reported in the affirmative, four placed their ratings at the midpoint, and only four teams said that the students they observed were somewhat unlikely to be able to apply what they had learned. Several teams remarked that their judgments were less favorable than they might, have been because they feared that traditionalist or money-conscious school systems might resist the introduction of some of the material the fellows would bring back with (hem from their year of training. A final indication of evaluators' views of the effectiveness of the Program comes from an analysis of the general comments they wrote at the end of the evaluators form. These comments revealed a clear acceptance, by all evaluators, of the general value of the ExTFP. Even those few evaluation teams which expressed rather extreme criticism of the institutions they visited, expressed the view that the fellows had profited in some degree from their year of study. Their criticisms frequently stemmed from the conviction that substantially more could have been accomplished had the program been conducted differently.

In summary, it is clear that there was general satisfaction with the Program, and widespread agreement that it was an effective educational venture. It should not be surprising that the directors, faculty, and fellows expressed approval of the Program. When one devotes a full year to a project, there develops considerable internal pressure to view that project favorably. Despite this built-in bias, the overwhelming favorableness of the opinions given by these three sources strongly supports the conclusion that the ExTFP was a satisfying experience for fellows and staff alike. The evaluation teams had no personal involvement in the outcome of their evaluation. They were specifically assigned a critical role, and they measured the programs against high standards of success. Their generally positive evaluations provide further evidence of the program's effectiveness.

B. Structural Aspects of the Programs

Doubtless because of the lack of specificity in the guidelines, there was considerable variation in the pattern of organization adopted by different institutions in implementing the ExTFP. Since only a limited humber of items dealt with such questions, many of these differences in program structure went unrecorded. Only three structural aspects of the programs will be dealt with here, all of them specifically discussed in the guidelines for proposals: the utilization of the en bloc approach, the relationship among teachereducation and content departments, and the pattern of relationship with local school systems.

1. The en bloc Approach, Group Solidarity, and Morale

Only one question dealt specifically with adoption of the en bloc approach. This was an item in the Visitors Evaluation Form which stated, "Unlike conventional graduate programs, the Experienced Teacher Fellowship Program is based upon a block or group program approach. The intent is to use the group to enhance learning by building morale and esprit de corps. Has this been successful?"

Evaluators' responses make it clear that the en-bloc approach was, indeed, successful. 12 evaluation teams reported that the approach was extremely successful and 13 others rated the approach as successful, but not extremely so. Only three teams said that the approach was in some degree unsuccessful.

Although the <u>en bloc</u> approach was not mentioned in the other three questionnaires, all three groups were asked whether there was a feeling of group solidarity among participants in the program; in addition, respondents were asked to rate the overall morale of the participants. The responses of the three groups are presented in Table 5.

Table 5. Ratings by Faculty, Directors, and Fellows of Group Solidarity and Morale

	a. Was the	ere a feeling of gr	oup solidarit	y ? ` ,		
,	Percent Answering					
Source	Strong	Considerable	Some	. None		
Faculty .	53	38	5	1 7		
Directors	67.	.27	7	0		
Fellows	46	38	14	1		
•	b, Ḥow wo	uld you rate fello	ws' morale?	• •		
\$ource	Very High	Pretty High	Average	Low and Very Low		
Façulty	23	- 51	₹4	4		
Directors	38.	42	18	2		
Fellows	22	38	27	10 ·.		

By every measure, solidarity and morale were high. Again, the directors' estimates of both variables were somewhat higher than those by the faculty, and the faculties' estimates were higher than those by the fellows. Even among the fellows only 1% said there was no feeling of solidarity and only 10% reported that the group's morale was below average. It should be mentioned that there was considerable homogeneity within groups of fellows, in their judgments of solidarity. That is, reports of relatively low solidarity were concentrated in particular institutions, they were not made by social isolates scattered among a number of programs but probably reflected, instead, a real lack of solidarity in a few of the programs.

2. Cooperation between Departments

It will be recalled that the guidelines for the ExTFP specifically called for cooperation between subject-matter and teacher-education departments in conducting the program.

Three questions, one each from the fellows, the directors, and the evaluators questionnaires, asked whether such cooperation was achieved.

In some institutions, such cooperation apparently did not extend much beyond consultation on the initial application. When asked whether the director of teachereducation was involved in the operation of the ExTFP, only 26% of the program directors replied that he was either quite involved or very much involved; just over half said he was nativery involved, and another 20% reported that he was not involved at all. This question, of course, asked only about the director of teacher education, not whether there was cooperation with others in lesser positions in the teacher-education hierarchy. In fact, when they were asked to describe the cooperation they received from other a cademic departments, 91% of the directors said it was either quite good or unusually good. This suggests that some collaboration must have taken place between teachereducation and subject-matter departments, or at least that the directors thought so. Evaluators' reports indicate that interdepartmental caoperation varied widely from one institution to another. While only one evaluation team reported very close cooperation between the two departments, another 12 placed their ratings at the cooperative side of the contiguum. On the other hand, 15 of the evaluators' judgments were on the uncooperative side; in five of these institutions evaluators said there was no cooperation at all between teacher-education and subject-matter departments.

Responses by fellows show much the same picture as those by evaluators. Eighty-four percent of the fellows reported that their instruction involved more than one academic department. Exactly half of these, 42% of the total group, said the material was coordinated either quite well or extremely well; the other half, again 42% of the total group, said the material was either not coordinated too well or was not coordinated at all. We should recognize, however, that his question does not bear directly on the point at issue, for the second department which the fellows had in mind need not have been the department of teacher education. One other item on the participants' questionnaire had at least a tangential bearing on this question. In response to a question about the relative emphasis on subject matter and teaching methods, the majority of fellows, 64% said that the balance was about right, 28% reported that there was too much emphasis on subject matter, and only 3% reported too much emphasis on teaching methods.

3. Cooperation with Local School Systems

Only one question dealt with this topic: evaluators were asked to report how extensive the relationships were between colleges and universities and cooperating school districts. Again, there were great differences from one institution to another: fourteen institutions were rated on the low end of this continuum, 12 at the high end, and five at the midpoint. In the evaluators' written comments about the programs, some of the most caustic had to do with the lack of practicum experiences available to fellows in those institutions without relationships to cooperative school systems.

To summarize, the en bloc approach seems to have been effective in most of the institutions that participated in the ExTFP; it was accompanied by a high degree of solidarity in most of the groups, and by reports of high morale among the fellows. In the matter of cooperation between teacher-education and subject-matter departments, the program of does not come off so well. It appears that while there was substantial cooperation in some institutions, in others there was little or none. The same wide range held true for the extent of cooperation between the participating institutions and local school systems.

C.__Operating Strategies

Even when programs have the same formal structure, the mode of operation may differ greatly along a variety of dimensions. Since it is known, for example, that graduate programs in American universities differ in the degree of competitiveness that they foster among graduate students, it would be expected that ExTF programs would vary in this regard. Similarly, universities, and by extension the ExTF programs, differ widely in the extent of faculty involvement with students and in faculty commitment to instruction.

Beyond this, the nature of the ExTFP suggests that there are other dimensions along which variation may be expected. The experience of teaching for a number of years has provided each fellow in the Program with a degree of specialization in his field; an awareness of the problems that are involved in teaching his subject, and an intellectual and emotional maturity that set him apart from the typical graduate and undergraduate student. His response to the program of courses that is offered should depend; in considerable part, on whether and how that program builds. For and utilizes his extensive experience.

We turn now to a discussion of differences among institutions in these aspects.

1. Utilization of Fellows' Background

All four sources -- fellows, faculty, directors, and evaluators -- were asked, in one way or another, whether they felt the program had taken advantage of the rich experience and prior preparation of the fellows. Although these questions were phrased differently for different populations, the four sets of responses have been grouped so that they are roughly comparable; they are presented in Table 6.

Table 6. Judgments of Whether Programs Juilt Upon Féllows' Experience and Preparation 1

	Percent of Each Group Responding				
Source	Yes	Uncertain	No		
Faculty -	66	23	6		
Directors	89.	' 7	4		
Fellows	63	24	12		
Evaluators	32	16	. 52		

In the faculty and directors questionnaires, the alternatives for respondents to check were "Yes," "Uncertain, "and "No." Fellows who said that the program usually or consistently built on their backgrounds have been scored as replying "Yes, those who said it rarely did so are scored as "Uncertain," and those who said it was unconcerned for their background are scored as saying "No." Evaluators' responses are recorded as "Yes," "Uncertain," or "No" according to whether their judgments were on the positive side of the midpoint, at the midpoint, or on the negative side.

Clearly there was a considerable difference among source in their judgments of whether the programs took account of fellows' backgrounds. Program directors were most likely to say that the programs had built on fellows' backgrands; faculty members and fellows were somewhat less certain, but the clear majority of these two groups agreed with the directors that the program utilized the fellows' prior experience. Real disagreement with these judgments was shown by the evaluation teams, over half of whom said that the institutions they visited had not designed their programs to take account of fellows' experience. The comments of those teams that were critical, on these grounds, of the institutions they visited were examined in some detail. In an interim report, based on about half of these responses, comments by critical evaluation teams were summarized in a manner which holds true after the remainder of the data have been collected:

Most commonly, evaluators who were critical remarked that fellows , were treated like regular graduate students, complete with the institution of multiple-choice examinations and competition for letter grades, with the prescription of a fixed schedule of courses, with little tailoring of individual programs to the needs of individual fellows, and with little or no opportunity for fellows to exchange ideas with one another about their own experiences. In short, ...these institutions offered substantially the same kinds of programs they had always offered.

Why the other three sources at those same institutions should so strongly disagree with the evaluators' judgments remains unclear. Perhaps in their involvement with one institution, they were unable to conceive of the range of alternative policies that the evaluators envisioned; as a consequence, policies that these sources thought were major concessions to the fellows' experience may have been viewed by evaluators as modest efforts, at best. That faculty members and program directors actually did believe they had utilized the fellows' experience is made evident by their replies to a question asking whether their program was modified to take advantage of the experience and background of participants. Sixty-two percent of the directors and 36% of the faculty answered this question affirmatively, 9% and 40% were uncertain, and only 27% and 16% answered."no."

.2. Competitiveness and Work Load

Our interest in discussing the extent of competitiveness and the size of fellows' work load is not to determine whether participants in the ExTFP worked or loafed, but to see whether they thought they were overworked and how intense was the competition among fellows. Unfortunately, the question that was asked of faculty members and directors appears to have been relevant to the first question, not to the second. It asked whether the students worked hard during the year. Eighty-four percent of the program directors and 79% of the faculties replied "Yes." A bare 13% and 15% respectively of the two groups said, "Yes, too hard." The remaining few respondents were uncertain or reported that fellows had not worked hard. In retrospect, these replies seem to reflect the respondents' approval of fellows in their programs more than their evaluation of the fellows' work load.

By contrast, fellows were about evenly divided between the opinion that their work load was about right (52% of the respondents) and the view that it was too heavy to allow completion of assignments and independent work (47%). Ratings by the evaluator teams also indicated that the work load in some schools was heavy: 10 of the 31 teams reported that the work load at the institution they visited was about right, the remaining 21 said that the work load was in some degree too heavy. As to competitiveness, 60% of the fellows said that the level of competition in their program was either quite high or extremely high, 31% said it was about right, and only 8% said it was either low or very tow. It should be mentioned that there was considerable homogeneity of judgments on these items among fellows in the same programs; that is, in certain programs almost all of the fellows said the work load-was too heavy, in others, almost all said it was about right.

A cogent comment on these judgments is the remark that graduate education involves a great deal of work wherever it occurs. Indeed, many of the evaluation teams who rated the work load as somewhat too heavy observed that such is the norm in graduate school, and that after the program was over fellows might cherish their experience the more for the fact that strenuous demands had been made of them. Nevertheless, it appears that some institutions did require far more work than their fellows could produce, thereby introducing severe emotional stress into the academic program.

3. \Involvement of the Faculy

Assignment to teach in the ExTFP might have been accepted by a faculty member as simply another unit in his teaching load, requiring no change in the kind of material, he presented, in the way he presented it, or in his involvement with the students. Alternatively, it might have been viewed as a special challenge which called for a somewhat different orientation toward both the subject matter and the students. The tone of the guidelines makes it clear that their intent is for the second attitude to be dominant among the staff of the ExTFP. There were no items in any questionnaire that dealt directly with the mode of orientation of the faculty, but there were a number that skirted it; we turn our attention now to those items.

Faculty members and program directors were asked whether they found the ExTFP a challenging and satisfying experience. As may be seen in Table 7, the majority of both groups replied in the affirmative to both questions. Program directors, once again, were somewhat more enthusiastic than the faculty.

Table 7. Ratings by Faculty and Directors of Whether the Program-Was Challenging and Satisfying

	•	•	<u> </u>		
	a . How Cha	lenging was the	e ExTFP?		
Source	Extremely	Somewhat *	Not Very	Not at All -	
Faculty '	47	42	5	a · 0.	
Directors	64	31	0 :	. 0	
	b. How satis	sfying was the l	xTFP?		
Source	Extremely	Somewhat	Not Very	Not at All	
Faculty	57	40	3	1 '	
Directors .	71	24	0/	0	•

The enthusiasm of the directors and faculty for teaching in the program was clearly picked up by the evaluation teams, for 22 of the 31 reported that the director and staff were challenged and stimulated by the program; only 8 gave judgments that fell toward the opposite pole of the continuum.

Fellows were not asked about whether the staff was challenged by the program, but whether they were accessible and helpful to students. Their responses were overwhelmingly favorable on both counts: 94% reported that the staff was either usually or always accessible, 95% said it was either usually or always helpful.

Although, as we have seen, the faculty and directors reported being challenged and stimulated by the Program, they were less likely to report that the experience affected their own professional and intellectual growth. As be seen in Table 8, only 41% of the faculty said their professional development was furthered either "greatly" or "very greatly" by the experience; only about 30% said it added greatly or very greatly to their intellectual growth and to their skill as teachers. Again, directors were more generous in their estimates of how much benefit they derived from the Program; 51% said it added greatly or very greatly to their professional growth, but only about a third judged it had a comparable effect on their intellectual growth or their skills as teachers. In each case, respondents' judgments of the benefits they derived from the program were less favorable than their ratings of the challenge and satisfaction they felt. It is not clear how much weight should be given to these results. Perhaps the experienced University teacher does not ordinarily profit in these ways from his teaching experience. In any case, it is clear that the experience may have been stimulating and challenging but was not viewed as educational for the majority of the staff.

Table 8. Judgments by Faculty and Directors of the Program's Effects on Their Own

Development

	, -	Percent Responding				
ltem .	Source	Very • Greatly	Greatly	Moder- ately	Li <u>tt</u> le	Very Little
28. Add to profession growth and develop-	Faculty Director	14 18	[*] 27 36	35 42	14	, 5 0
29. Add to your Intellectual growth?	Faculty Director	11 9 •	19 29	40 56	· 18 4	7
30. Add to your skill as , a téacher?	Faculty Director	1 0 9	19 24	42 53	.19 4	4

Percentages in each row do not total to 100 because non-respondents are not included.

4. Departmental Innovativeness

It was not required that institutions prepare thoroughly innovative proposals in order that their programs be funded under the ExTFP. Instead, substantially traditional proposals were examined in competition with completely innovative ones; approval or disapproval for funding was the determined in terms of the program's novelty, but in terms of how effective it seemed likely to be in furthering the education of experienced teachers.

In the view of program directors, there was innovation in the great majority of the institutions. Of 42 directors who responded to this item, 32 said they had seen imaginative teaching methods and practices in their programs, 6 were unsure, and only 4 reported that they had not seen such practices. As usual, judgments by faculty members were less extreme: of 174 who responded to the item, 79 reported innovations, 22 were unsure, and 73 reported none.

The evaluation teams agreed more with the faculty than with the directors:

12 teams rated the institutions they visited as being on the innovative side of the midpoint,

12 ratings were on the noninnovative side, and the remaining 7 were exactly at the

midpoint. None of the evaluator ratings fell in the most extreme categories, those which
indicated either a great deal of imagination and innovation or none at all.

In summary, there was disagreement among sources on the extent to which they thought the programs had utilized the background and experience of fellows. The least enthusiastic source of ratings, the evaluators, judged that there were more institutions which did not make sufficient use of the fellows' experience than there were which did. Apparently, there were systematic differences between institutions in the amount of work assigned to students. In every institution a considerable amount of work was required, but is some the amount was enormous. By all accounts, the faculty was challenged and stimulated by the program, accessible and helpful to the fellows. Finally, it appears that programs were neither thoroughly innovational nor stodgily traditional.

5. Effects on Institutional Development

One of the benefits the Program might have wrought, indeed, one of the effects that was envisioned initially, was a strengthening of the participating institutions themselves, particularly in their on-going teacher education programs. Obviously, changes in the pattern of teacher education will have effects upon the preparation and later performance of those who are trained; therefore, it is important to determine whether the Program actually influenced educational patterns in the host institutions. Important though this question may be, it is uncertain whether it can be answered adequately by the present study. These data were collected in the first year of the Program's operation, barely eight months after it was instituted. Whatever effects it may ultimately have upon procedures for teacher training, these effects are not likely to have taken place by the time these data were collected. Consequently, the conclusions we may draw about such effects must inevitably be tentative.

Of the five items that dealt with this issue, two were global judgments, by the directors and the faculty, of the Program's "value to the institution." One evaluator item asked about the Program's contribution to the plans of the Department, and two items, from the evaluators and the directors, asked specifically about the Program's "impact on the on-going teacher education program." Thus there were three distinct, if related, issues involved in these items: value to the institution, contribution to department development, and impact on teacher education.

As was so often the case, judgments on these questions varied remarkably from one source to another (Table 9). More than three fourths of the faculty members and the directors reported that the Program was either "valuable" or "very valuable" to their institution.

On the other hand, among evaluation teams as many said the program's contribution to departmental development was slight or non-existent as said it was moderate or great (36%, in each case). The same divergence of opinion variound in judgments of the Program's effect on teacher education: 62% of the directors said its impact on teacher education was relatively large and only 23% said it was small; the corresponding figures for evaluation teams were 16% and 58%.

Table 9. Judgments by Faculty, Directors, and Evaluators of the Program's Effects Upon Institutional Development

	a. Percent saying Program's value to institution								
Source .	Great	Moderate	Undecided	Slight	• None				
Directors Faculty	42 29	44 47	. 9	2	0 1				
, ,	b. Contribution to departmental and institutional development								
Evaluators	26	. 10	29 ,	26.	10				
,	c . Impact on teacher education								
Directors Evaluators	24	38 10. ;	13 26	16 26	7 32				

To make results from three questionnaires comparable, responses to the Visitors

Evaluation Form have been classified as follows: checks in either of the two most favorable categories are scored as judgments that the program had great effects; those in the third most favorable category are scored as reflecting moderate effects; those in the center category are classified as "undecided"; and responses are considered as imputing slight effects or none according to whether they fell in the thirder in the two most unfavorable categories.

These differences in judgments by the different sources probably beflected a number of factors. For one thing, the directors and the faculty had more at stake in the Program than did the evaluators; no doubt this involvement influenced their judgments in a favorable direction. It is probably true, as well, that the different sources used different criteria to assess the effects of the Program; what looked like a remarkable advance in the context of a particular institution may have seemed trivial to an outside observer. Paradoxically, some of the disagreement in judgments may have occurred because institutional changes had been made before the ExTFP was undertaken. A few evaluation teams said the Program had little impact on teacher education because the existing procedures were advanced and effective. Program directors attributed more influence on teacher training to the Program than did the evaluators.

One determinant of whether a change was effected in the host institution's teacher-training practices was the division of the institution in which the ExTFP was located. All five of the institutions that evaluation teams rated above the midpoint on "impact on teacher education" were based in education departments. Judgments by evaluation teams of the extent to which departmental and institutional development were affected showed the same patterns: 7 of the 8 programs in which evaluation teams said the effects were greatest were based in education departments. Not surprisingly, then, educational changes were more likely when Departments of Education were directly responsible for the Program; stated somewhat differently, educational programs that were located in Liberal Arts departments did not have immediate effects on the policies of education departments.

D. General Summary of Impressions of the ExTEP

It is clearly evident from the results that have been reported in this section that the sources' evaluations of the ExTFP varied directly with their involvement in the program. Program directors, who probably had the most at stake in the enterprise, were thoroughly enthusiastic, not to say Pollyannaish, in their ratings. Regular faculty members and fellows, who were somewhat less personally involved than the directors, made judgments that were a little less enthusiastic than those of the directors. Evaluation teams, who spent only two days viewing the programs and who maintained calculated objectivity as their ideal, were able to temper their enthusiasm with criticism.

Yet it is the burden of this report that all four sources, including the evaluators, produced predominantly favorable judgments of the program. Furthermore, the responses of those who were involved in the program are not to be discredited simply because of their involvement. In all but a very few institutions, it appears, a group of highly qualified teachers were brought together with a group of intelligent, hard working, experienced, thoroughly committed students. When circumstances also promoted the development of strong group solidarity and high morale among the fellows, a truly impressive educational experience probably occurred. Even when the social context was less than ideal, the juxtaposition of a first-rate student body and a better-than-competent faculty doubtless produced educational effects that were considerably above the average.

V. Correlates of Effectiveness and Satisfaction

We have seen that satisfaction with the ExTFP and judgments of its effectiveness were both very positive. Nevertheless, there were consistent differences from one program to another in the extent of satisfaction of the various respondents and in the ratings of reffectiveness that they gave. Our purpose in this section is to examine the relationship of other variables to judgments of effectiveness and satisfaction.

Two sources of evidence — one qualitative, the other quantitative — are used in this analysis. The qualitative material consists of comments by evaluation teams about the influence that program directors had upon the effectiveness of the ExTFP. This chapter begins with a discussion of these comments. The quantitative material is made up of correlations among responses to the various questionnaires; the analysis of this material constitutes the bulk of the chapter. A defailed summary is presented at the end of the chapter; readers who are unfamiliar with correlational materials may find it helpful to read this summary before examining the correlation tables in detail.

A. The Role of the Director in Program Effectiveness

Analysis of the role of the program's director in the operation of the ExTFP was not systematically built into the questionnaires and the evaluator's ratings. Nevertheless, reports from evaluation teams made it clear that the actions of the director were frequently crucial to the success or lack of success of individual programs. Once this became clear, the written comments of the evaluation teams were examined in detail to make whatever inferences were possible about this topic. Analysis of these comments may be summarized as follows:

It is apparent from the reports of evaluation teams that the quality of directors had a major impact on the conduct of programs. In general, when the evaluators commented on the obility, dedication, enthusiasm, availability, and seriousness of directors, they also rated the programs as effective and productive. When comments were made about the director's lack of status in the institution, when the directorship changed between the time of application and the time the program began, when tension ruled between the director and his staff, the program was characterized as weak, poorly planned, poorly integrated, and unproductive.

Because there was no provision in the guidelines stipulating that the director be given released time for his administrative duties, many directors backed time to carry out their duties and lacked funds for necessary supporting work. In some cases, the director functioned as a coordinator rather than an administrator, with neither the

Professor William Engbretson carried out this analysis and drafted the summarizing statement.

power nor the funds to conduct the program as it had been represented in the proposal. In sum, programs seemed to be most effective when the director was deeply involved in the program's goals and was able both to devote sufficient time to administrative duties and to foster cooperation and respect from participants and faculty.

The frequency and urgency of these comments suggests that special consideration should be given to this key role in future studies of the ExTFP and in the organization of individual programs.

B. Some Comments on Corte ational Methods

1. The Nature of the Data

To determine the relationships among variables, for every institution the arithmetic mean was computed for the judgments made by each source on the items that were of interest. This permitted institutions to be arrayed, for example, according to the average degree of satisfaction that the fellows expressed, according to the average faculty rating of effectiveness, and so on for a substantial number of variables. Product-moment correlation coefficients were then computed among these variables.

It should be obvious that two variables cannot be correlated with one another unless there is at least some variation in the scores on each from one observation to another. If all of the scores on one item fall at the identical point, then responses to that item cannot possibly co-vary with responses to some other item. On many of the items that dealt with satisfaction and effectiveness the responses of directors showed next to no variation, being largely concentrated at the most favorable alternatives. For this reason, directors' responses will not be included in the correlation matrices that are presented in this section.

There remained responses by faculty and fellows at 47 institutions, and responses by faculty, fellows, and evaluators at 31 institutions which were visited. It seemed clear that our interpretation of the results would be substantially strengthened by including a discussion of the correlations of evaluators' judgments with those made by fellows and faculty members. However, correlations based only on the 31 programs that were visited might, because they ignored 16 other institutions, give a distorted picture of the true pattern of relationships among variables. To make sure that this was not the case, two correlation matrices were computed; one based on responses by faculty and fellows in all 47 institutions, the other based on responses by faculty, fellows, and evaluators in the 31 schools that were visited. A comparison of the correlations between identical pairs of variables in the two matrices, showed that very similar results were obtained. Therefore, only correlation coefficients based on the 31 programs that were visited will be used in the results that are reported below. With a set of 31 observations, a correlation of about 35 is required for the inference that it differs from zero by an amount greater than would be expected by chance.

2. Interpreting the Correlation Coefficients

When two variables show a sizeable correlation, it is often tempting and sometimes reasonable to conclude that they are somehow causally related. This temptation should be indulged with caution, if at all; causal relationships cannot be established by correlational techniques. For example, we shall see that there was a high positive correlation between fellows' morale and their judgments of program effectiveness: in programs where morale was high, fellows' judgments of effectiveness was high, when morale was low so were fellows' judgments of effectiveness. Clearly, however, this does not mean that high morale produces an effective program. It is equally likely that the causal chain goes the other way, that morale goes down when a program becomes ineffective or up as effectiveness improves. It is also plausible that the two variables interact, so that some degree of ineffectiveness depresses marale, which makes for even less effectiveness, decreasing morale still further. The point is that one should be cautious in interpreting correlations. The results that will be reported below often seem to point toward ways by which programs can be improved; we believe, in fact, that they offer suggestions for improvement. But these suggestions must be examined intelligently, not accepted uncritically as a consequence of an impressively large correlation coefficient.

A final point must be made. It has long been known that when judgments are made on several variables, all of which have a desirable and an undesirable pole, a built-in correlation is introduced. A respondent who takes a favorable or unfavorable stance with respect to some issue is likely to rate all of the subsidiary aspects of that issue in a manner consistent with his over-all position. In particular, people who are favorable to the ExTFP as a whole-would probably be partial to all its parts. We have already seen evidence of such a tendency in the responses of the program directors. So a certain degree of correlation must be expected between any pair of items from the same questionnaire os o simple function of this bias. However, such a bias cannot be invoked as on explanation when items from different questionnaires correlate with one another; when two different sources agree in their ratings of an institution on some dimensions, the bias of either source alone cannot be invoked as an explanation. For this reason, special attention must be given to the correlations between judgments that were made by different sources.

C. Correlations Among Measures of Effectiveness and Satisfaction

It has already become evident at faculty members, fellows, and evaluators all showed favorable opinions of the effectiveness of the ExTFP. The question at hand is whether an institution that was ranked high on one measure also received a high ranking on another. For purposes of this presentation, measures of satisfaction and effectiveness will be combined in one correlation matrix owing to the fact, os we shall see, that the two kinds of measures had very high correlations with one another.

Table 10 presents the pattern of correlations among eight measures of effectiveness and satisfaction. It is apparent that there were consistently high positive correlations among such ratings when they were given by the same source. Thus, the average correlation among the faculty items was +.55 and the average correlation among the three fellow items was +.72. High correlations were also obtained between judgments by the fellows and those by evaluators, the average correlation being +.55. As to correlations between faculty judgments and those by the other two sources, however, only faculty ratings of whether the program met the fellows' educational needs' correlated with all of the items from the other sources. In addition, faculty judgments of whether the fellows would become better teachers correlated with fellows' judgments of effectiveness and satisfaction but not with evaluators' judgments. Faculty members' own reactions to the program and their ratings of its value to the fellows did not correlate significantly with any of the ratings of satisfaction and effectiveness that fellows or evaluators made.

Table 10. Correlations among Measures of Effectiveness and Satisfaction

		· · · · · · · · · · · · · · · · · · ·		
		Faculty	Fellows	Ěv. ≻
Source	\tem	16 18 20a 26	23 24 31	19
Faculty	16. Reaction to ExTFP 18. Did fellows become better teacher? 20a. ExTFP valuable for fellows? 26. ExTFP meet fellows needs?	43 .63 .69 .434362 .63 .4349 .69 .62 .49		.24 .14 .12 .44
Fellows	23. ExTFP meet your major need? 24. Reaction to ExTFP 31. ExTFP help your teaching?	.26 .43 .02 .41 .31 .46 .01 .58 .34 .55 .1761	.6181	.40 .60 .65
Evaluator	19. ExTFP meet fellows' needs?	.24 .14 .12 .44	.40 .60 .65	~-

The fact that the fellows' judgments of effectiveness correlated with those by the evaluators and also with faculty members' estimates of whether the ExTFP met the fellows' educational needs is encouraging evidence of consistent, reliably-ascertained differences between programs in their effectiveness. Why the other faculty measures of satisfaction and effectiveness did not also correlate with the items from the fellows' and the evaluator questionnaires is not immediately clear.

D. The Relationship Between Program Effectiveness and Program Structure

Under this heading we will consider the correlations between program effectiveness and three classes of variables: (1) achievement of the en bloc approach, solidarity, and morale, (2) relations among departments and institutions, and (3) the role of the director. In each case, we first present the correlation among variables within the set, then their correlations with effectiveness.

1. The En-Bloc Approach, Solidarity, and Morale

a. Correlation among measures. We have already learned (a) that a generally high level of solidarity was achieved in all of the programs but (b) some institutions had a consistently higher level-of morale than did others. Table 11 presents the correlations among the different ratings of solidarity and morale. All but one of the 10 correlation coefficients achieved statistical significance, the mean correlation being .58%. There was, then, remarkable agreement between sources as to which programs were characterized by a very high degree of solidarity and morale and which were not. It should be noted that the lowest correlation in this table, .30, was between the evaluators' rating of successful achievement of the en bloc approach and the faculty rating of student morale.

Table 11. Correlations among Measures of Solidarity and Morale

Sour a e	* Item	•	Faculty 48 49	Fellows 47 49	Fv.: 17.
Faculty	48. Student solidarity 49. Student morale	• 1	71 .71 3	.57 .68 .57 .67	.45 .30
Fellows	47. Student solidarity 49. Own morale		.57 .57 .68 .67	76 .76	.49
Evaluator	17. En bloc successful		.45 .30	.49 .56	

b. Relation of solidarity and morale to satisfaction and effectiveness. Table 12 presents the correlations between measures of solidarity and morale and those of satisfaction and effectiveness. It is evident that the majority of these correlations were quite high, even when the ratings were obtained from different sources, except that fellow and evaluator ratings of solidarity did not correlate significantly with faculty measures of effectiveness. The average correlation of faculty ratings of solidarity with faculty

ratings of effectiveness was + .50, with fellows' ratings of effectiveness, + .46, and with the evaluator rating of effectiveness, + .47. The average correlation of fellows' ratings of solidarity with their own ratings of effectiveness was + .47, with the evaluator rating of effectiveness, + .42, and with faculty ratings of effectiveness, + .28. Finally the evaluator rating of achievement of the en bloc approach correlated + .71 with the evaluator measure of effectiveness, had an average correlation of + .41 with fellows' measures of effectiveness, and an average correlation of only + .18 with faculty ratings of effectiveness. Whatever the causal factors that may be involved in these correlations, it is clear that the achievement of the en bloc approach and of solidarity and morale was associated with program effectiveness, especially as viewed by fellows and evaluators.

Table 12. Garrelations of Solidarity and Morale with Program Effectiveness

	ア福 .			
Source: -	Item	Facolty '	Fellows 23 24 31	Ev. 19

Fellows	47. Student solidarity 49: Own morale	.27 .37 .2232 .30 .25 .22 .30	.53 .64 .55 .13 .57 ,41	.44 .40
Evaluator	17. En bloc successful	.28 .08 .13 .21	.29 .51 .44	.71

2. Relations among Departments and Institutions

a. Correlations among measures. Under this heading will be considered evaluator and fellow ratings of cooperation between departments, and evaluator judgments of whether the institution had established relationships with the local school systems. It will be remembered that respondents reported great variability among programs in the extent of cooperation between subject-matter and teacher-education departments, and in the amount of cooperation with local school systems. Table 13 presents the correlations among the three measures of cooperation. None of these correlations is higher than 4.21. This independence of one set of responses from another reveals, first, that according to evaluators reports, whether subject-matter and teacher-education departments cooperated had no bearing upon whether cooperation was established between the institution and local school systems. Second, the low correlation means that

judgments of departmental cooperation made by fellows were either based upon different criteria from those used by evaluators or that the two groups used their criteria differently in these judgments.

Table 13. Correlations among Measures of Departmental, and Institutional Cooperation

		Fellows	Evaluator .
Source	Item	38	4
Fellows	38. Departments cooperate		.15 .21
valuator	3. Depärtments cooperate 4. Copp. with local schools	.15	18 .18

b. Correlations of measures of cooperation with program effectiveness.

Despite the lack of correlation among these measures cooperation, we see in Table 14 that both fellows' and evaluators' assessments of depote tental cooperation were correlated significantly with ratings of effectiveness made by fellows and evaluators; however, they were consistently uncorrelated with faculty ratings of program effectiveness. Thus, although the fellows may have used different criteria from evaluators in jedging departmental cooperation, by either criterion, programs that were rated as having a felatively high degree of cooperation among departments were more likely than have to be adjudged effective. The degree of cooperation with local school systems, as reported by evaluators, was substantially unfetated to any measures of effectiveness.

Table 14. Correlations of Departmental Cooperation with Program Effectiveness

E. The Relationship Between Program Effectiveness and Program Strategy

The reader will recall that the general topic of program strategy subsumed ratings of the utilization of fellows' background, the amount of competitiveness and the work load, the involvement of the faculty, and the extent of innovation in the programs. The correlation of each of these variobles with effectiveness will be discussed in turn.

1. Utilization of Fellows' Background

a. Correlation among measures. In their judgments of whether the program's organization took into occount the extensive experience of fellows, evaluation teams were distinct from the other three groups in saying that the majority did not. Though they disagreed with the fellows in the extent to which they felt that fellows' backgrounds were utilized, the evaluation teams clearly arrayed institutions on this varioble in about the same order as did the fellows, for the correlation between ratings from these two sources was + .45. This correlation, in fact, was the largest correlation in the matrix (Table 15); the only other significant correlation is that between fellows' judgments on this variable and faculty statements that the program was modified to take advantage of fellows' experience.

Table 15. Correlations among Measures of Whether the Programs Utilized Fellows'
Backgrounds

		Facu	ty	Fellows	Ev.
Source	lte'm	45	46	. 42	16 -
Faculty	45. Effort to use experience 46. Modify prog. for experience	.06	.06	.05 .38	.07
Fellows	42. Build on experience	.05	. 38	,	.45 :
Evaluator	16. Take occt. of experience	.22	.07	.45	*

b. Correlations of utilization of participants' backgrounds with program
effectiveness and solidarity. As is shown in Table 16, faculty judgments of whether the
program utilized fellows' experiences were not significantly related to any measure of
effectiveness; faculty statements that the program was modified to take advantage of the
fellows' experience were generally related to the faculty's own estimates of effectiveness,

but not to those by fellows and by evaluators. On the other hand, evaluators' and fellows' judgments on this same measure were significantly related to every fellow and evaluator measure of effectiveness and also to faculty judgments that the program met the educational needs of the fellows. We may conclude, then, that the programs whose organization built best on the backgrounds of the fellows according to the interpretation of the evaluators and the fellows (and we do not know the criteria on which these sources based their interpretations) were also adjudged to be more effective.

Table 16. Correlations of Utilization of Participants' Backgrounds and Program Effectiveness

2. Competitiveness and Work Load

empirical support to our earlier conclusion that the faculty judgments about student work load represented a positive statement about the fellows, not an objective assessment of the amount of work they were required to do: every correlation of the faculty judgments on this item with those of fellows or evaluators was negative. On the other hand, fellows judgments of their work load correlated positively and significantly with those of the evaluators. It should be noted, in addition, that neither of these last two measures—fellows' and evaluators' estimates of the work load — correlated significantly with fellows' statements obout the level of competitiveness in their programs; cleorly, fellows could believe they were overworked in either a competitive or a non-competitive atmosphere.

Table 17. Correlations among Measures of Competitiveness and Work Load

Source	Îtem	Faculty 35	Fellows '	E∨. -14
Faculty	35. Did students work hard		3931	26.
Fellows .	26. Work Load 29. Level of competition	39 31	28 .28	.54 .01
Evaluator	14. Work Load	26	.54 .01	, -

b. Relationship of competitiveness and work load to program effectiveness.

Further evidence for our conclusion that faculty ratings of the amount of work the fellows did actually represent favorable judgments of their performance is given in row 1 of Table 18.

This measure correlated positively and significantly with every faculty rating of program effectiveness and with two of the three effectiveness ratings made by fellows.

A different pattern held for fellows' ratings of their work load. These judgments showed a high negative correlation with fellows' opinions that the program was stimulating and interesting and moderate negative correlations with the other ratings of program effectiveness by the fellows and evaluators as well as with faculty judgments of whether the program produced better teachers. Evaluator ratings of work load also showed negative correlations with fellow and evaluator ratings of effectiveness. As to the level of competitiveness in the program, while the correlations of this measure with judgments of effectiveness and satisfaction were consistently negative, they barely achieved statistical significance in only two cases. In short, programs in which fellows and evaluators reported that the work load was excessive tended also to be programs which received low marks for effectiveness and satisfaction, but a program that was viewed as competitive was not necessarily ineffective:

Table 18. Correlations of Competitiveness and Work Load with Program Effectiveness

Source	Item /	Faculty 16 20a 26	18	Fellows 23 · 24	31	Ev. 19
Faculty	35. Work hard?	.49 .41 .63	.62	.22 .51	.46	.24
Fellows	26. Fellows' work load 29. Competitiveness	34 .0321 - 172824 -				32 .04
Evaluato	14. Fellows' work load	26 .0830 -	26	2444 -	.35	38

3. Involvement of the Faculty

a. Correlations among measures. There were five items that bore on the faculty's involvement in the ExTFP: two of these asked the faculty whether the ExTFP had been challenging and satisfying, one asked evaluators if the faculty had been challenged and stimulated by the ExTFP, and two asked fellows whether the faculty had been accessible and helpful. The correlations among these measures, presented in Table 19 show that almost the only significant correlations are between measures from the same questionnaire. Thus, institutes in which the faculty said they were challenged were also those in which the faculty found the teaching satisfying; schools in which fellows reported the faculty were accessible were schools in which fellows said the faculty were helpful. The only significant correlation between items from different questionnaires was between fellows' reports of faculty helpfulness and evaluator ratings of faculty stimulation.

Table 19. Correlations among Measures of Faculty Involvement

,		Facult	ty .	Fello	ws.	F. Ev.
Source	ltem	24	25	4 la	41b	9a
Faculty ; ·	24. Was teaching challenging? 25. Was teaching satisfying?	.56	.56	.19	.30	.33
Fellows	41a. Were faculty accessible? 41b. Were faculty helpful?	. 19 . 30	.10 28	.87	.87 ·	.24
Evaluator	9a. Was staff challenged?	.33	.14	.24	.41	

b. Correlations between faculty involvement and effectiveness. The pattern of correlations between faculty involvement and effectiveness, presented in Table 20, is not easy to understand. One of the faculty measures, statements about whether the teaching experience was satisfying, correlated with virtually every measure of effectiveness and satisfaction -- perhaps because it might, itself, be called a measure of satisfaction. Evaluators' judgments of whether the faculty was challenged were correlated with fellow and evaluator, but not faculty, measures of effectiveness. Fellow ratings of the faculty's helpfulness and accessibility correlated significantly only with their own judgments of effectiveness.

Table 20. Correlations of Faculty Involvement with Program Effectiveness

4. Innovativeness

As we have seen, on the two measures of innovativeness, neither faculty members nor evaluators reported any appreciable degree of innovation. Nor did measures of innovation from the two sources vary jointly: the correlation between them was .10.

On the other hand, as may be seen in Table 21, the faculty estimate of innovativeness was related to every measure of program effectiveness; the average correlation of this variable with faculty ratings of effectiveness was .55, with fellow ratings of effectiveness, .48, and with the evaluator rating of effectiveness, .38 (Table 21). Evaluator ratings of innovativeness, on the other hand, were significantly related only to the evaluator measure of effectiveness and to faculty judgments of whether the fellows became better teachers as a result of their experience. We see, then, that by the evaluators' standards of innovation, our earlier generalization holds up: programs could be effective whether they were extensively innovative or substantially traditional. It should be noted that this question asked faculty members whether they had observed innovative teaching methods or practices; in view of this wording, their judgments may have reflected inventiveness in some one teacher's performance rathers than innovativeness in the over-all program. If so, the meaning of this variable's correlations with effectiveness is considerably different from the meaning that would be carried by a correlation with innovativeness in the program itself.

An alternative explanation of the correlation between these faculty ratings and effectiveness is that the current popular emphasis on innovation in education has served to make "quality" and "innovation" in some respects synonomous for many people. Thus many faculty members may have felt that if they judged their program to be successful, it must have been innovative, & well.

5. Effects on institutional development

a. Correlations among measures. We have seen above that the three sources differed remarkably in their estimates af the Pragram's effect on institutional development. As might be expected, the pattern of correlations between variables showed the same lack, of correspondence (Table 22): estimates by faculty members of the Program's value to the institution were uncorrelated with evaluators' ratings af both effects on teacher training and effects on departmental development. At the same time, the high correlation between the two evaluators' judgments shows the institutions at which evaluators felt changes were made in methods of teacher education also were judged to be institutions where departmental development was affected. This relationship, actually is partly determined by the fact that the "department" whase development was being affected; that is, the home department of the program, was in half the cases the department of education.

Table 22. Carrelations among Measures of Effects an Institutional Development

Source	Irem	Faculty 20c	Evaluator 1 8
Faculty	20c. Value ta institution	 · ·	.16 .07
Evaluator	Effects an teacher training Effects an department development	. 16 . 07 _	.36,

b. Correlations between institutional development and effectiveness. Table 23

presents the correlations between measures of institutional development and judgments of satisfaction and effectiveness. Global judgments by faculty members of the Program's value to the institution carrelated positively with their awn ratings of satisfaction and of

program effectiveness, but were only minimally related to such rotings by other sources. : Evolutior judgments of the Program's effects upon the host institution showed low positive relationships to their own and fellows' ratings of effectiveness, but were unrelated to such ratings by faculty members. In short, it oppears that a program could be effective in training tudents without, necessarily, serving os the impetus for extensive changes in the pattern or organization of the host institution.

E. Summary: Correlates of Effectiveness

Detailed comments should be made obout two ospects of these results. The first has to do with the reliability of judgments, with whether two judgments which seem, on the surface, to be asking the same question do, in fact, correlate with one another; the second is the consistent correlates of satisfaction and effectiveness.

1. The reliability of the judgments

. In general, when a single source was asked more than one question on the same topic or logically related ones, the responses to those questions were positively correlated. Thus, foculty, fellow, or evoluator responses to one item showed generally high correlations with responses by the same source to other items whose content was similar. For example, institutions whose foculty members said the Program was stimulating and interesting throughout were also the ones whose faculty said that the Program was of great value to the fellows, that it helped the fellows become better teachers, and that it met fellows' educational needs.

However, responses by different sources to items that were similar in content did not always correlate significantly. Two sets of items -- satisfoction and effectiveness, and solidarity and morale -- showed marked consistency across.all'three sources; for each set of items, the ratings that institutions received from foculty members paralleled those given by fellows and also, to a lesser extent, those given by evaluation teams. On a number of other factors, responses by faculty members were substantially uncorrelated with those of

'fellows and of evaluators. However, the responses of fellows and those of evaluation teams correlated virtually across the board -- in ratings of satisfaction and effectiveness, of solidarity and morale, of fellows' work load, of whether the fellows' experience was utilized, and of the extent of faculty involvement in the Program, responses from these two sources correlated significantly; only in judgments of whether there was cooperation between different departments were fellows' judgments and those by evaluators uncorrelated. For one set of items -- estimates of fellows' work load -- faculty judgments were inversely related to those from the other two sources, probably because the question that was asked of faculty members evoked judgments of the level of fellows' motivation instead of objective assessments of their work load. In short, there was consistently high agreement between judgments by fellows and those by evaluation teams; agreement between these two sources and the faculty was largely restricted to two areas: (a) satisfaction and effectiveness and (b) solidarity and morale.

It is interesting to speculate about the meaning of this differential pattern of correlations. Since the three sources viewed the program from different perspectives, the pattern of correlations probably reflects such differences. It might be argued, first of all, that whether a program-was very effective or relatively ineffective, and whether its fellows had very high or relatively low morale could be determined by faculty and fellows alike from evidence that is public and common. People discuss with one another how much #hey have learned and how well it was presented; there are indicators of group solidarity and morale which almost any adult can see and identify. On the other hand, more subjective. criteria are called into play for judging whether and how much the fellows' prior experience was utilized by the program, or how deeply the faculty was involved in the program. Such questions are probably less frequently discussed, the bases for decision about them less commonly shared, than the topics of effectiveness or group solidarity. If this is true, judgments on these latter topics would be more likely to reflect the biasing effect of the judge's social position. To be more specific, it seems likely that the faculty's institutional position made it unlikely that they would learn much about the fellows' past experience and its relevance to the course material, or about fellows' judgments of whether the faculty was involved in the program. In the absence of explicit information, the faculty was doubtless likely to respond in a manner consistent with their desire that their own program be rated effective and "good."

These considerations would account for the lack of correlation between responses of fellows and faculty on issues of this second type, but not necessarily for the fact that judgments of evaluators paralleled those of the fellows instead of the feculty when the latter sources disagreed. Perhaps their discussions with the fellows exposed evaluation teams to information that was not available to the faculty; alternatively, perhaps evaluators considered the faculty to be more personally involved than fellows in the outcome of the evaluation, hence more likely to be biased in their judgments.

Whether one of these explanations or some other one can account for the results, of course, requires information that is not available in the present study. Concerning the reliability of judgments, we have seen that judgments made by a single source on a single issue were quite reliable, that consistent positive correlations were found between the three different sources in their judgments of effectiveness and of morale, and that evaluation teams and fellows consistently agreed with each other, but not with the facult, on other issues.

2. Correlates of satisfaction and effectiveness

Programs that ranked high on satisfaction and rated effectiveness (a) were adjudged by faculty and by fellows to have a high degree of solidarity and morale, and by evaluation teams to have been successful in achieving esprit de corps through the en bloc approach; (b) were successful in the view of fellows and of evaluators in utilizing the previous experience of the fellows; and (c) were adjudged by fellows and evaluators not to have required an altogether unrealistic amount of work.

The fact that effectiveness and morale went together is not surprising; it reaffirms a long standing common-sense generalization. It is interesting to note, however, that effectiveness was correlated only with judgments by fellows and evaluators of whether the fellows' backgrounds were utilized and of work load; judgments by faculty members on the last two issues did not correlate with the same judgments by the other two sources. This suggests that the faculty and directors may often have been uninformed of the fellows' attitudes on these and other issues; indeed, spontaneous comments by evaluation tems suggested that such was often the case. This, in turn, has implications for the conduct of programs in institutions where the fellows thought that their work load was much too heavy, or that they were too seldom able to contribute from their own knowledge and experience to the educational program, and where the faculty and director were unaware of these attitudes. It seems likely that information about fellows' attitudes might have induced the staff of the programs either to change some part of their educational structure and content so as to meet the fellows' objections, or to clarify for fellows and staff alike the reasons for retaining an existing system. These actions, in turn, would likely have made such programs more enjoyable and effective. The obvious suggestion, then, is that some programs might have been much more effective if the fellows' views on sensitive issues had been more effectively communicated to the faculty and the director. Clearly, the primary responsibility for ensuring that such communication takes place rests with the director and his staff, not with the fellows.

Although fellows and evaluators did not agree as to which programs had a great deal of cooperation among departments and which did not, by either the evaluators or the fellows' criterion, programs with such cooperation were more effective than those without it. Similarly, although faculty members and evaluators did not agree as to which host institutions benefitted most from the Program, those institutions that either group judged to have benefitted most were rated as most effective. Two other kinds of questions showed inconsistent patterns of relationships with satisfaction and effectiveness. Ratings by each source of the extent of faculty involvement in the program were correlated with effectiveness as rated by that source but not as rated by the other sources.

Finally, there was a significant correlation between faculty ratings of innovativeness and every measure of effectiveness — institutions whose faculties were impressed with the innovations that had been introduced through the Program were considered to be relatively effective by faculty, fellows, and evaluators alike; however, evaluatar ratings of innovativeness were only marginally correlated with effectiveness as judged by evaluators and were uncorrelated with such judgments by the other two sources. We have suggested that faculty ratings of innovativeness may have reflected their own involvement in the program more than objective judgments of this phenomenon.

We have already remarked that one should not infer causation from carrelation. Hopefully, future studies in this series will help further to clarify the factors that account for differences among institutions. Our caveat against confusing correlation with causation, however, does not apply to the relationship between the director's behavior and program effectiveness. The experience of the evaluation teams strongly suggested that an energetic, persuasive director with institutional power commensurate to his responsibilities could play a major role in assuring the effectiveness of the program. Conversely, a promising program was sometimes rendered less effective by an inept director, one with insufficient time to give to his duties, or one denied the power to institute and carry through both general policies and the specific procedures necessary to implement those policies.

(e) Lieig jiibž	-	, 13.4	21.0	17.5		01.3	

37. How well would you say that the different components of your Experienced Teacher Fellowship Program -- lecture courses, seminars, instruction in media and methods, laboratories or workships, and field trips -- were coordinated and related to one another?

16.5. Exceptionally well coordinated and related

Usually coordinated and related, but sometimes not

Sometimes correlated and related, but usually not,

9.2 Seldom or never coordinated and related

.6 No response

38. If your Program involved instruction in more than one academic department, how well was the material in one department coordinated to that in another?

7.8	Extremely well
34.5	Quite well
27.6	Not too well
14.5	Not well at all
11.8	Inapplicable to my Program
3.7	No response

39. How about the relative emphasis on subject matter and on methods of teaching?

28.2	There was too much emphasis on subject matter	
64.3	There was a satisfactory balance between consideration of subject matter and	ot
	teaching methods	
3.2 -	There was too much emphasis on teaching methods	
4.3	No response	

40. The following statements describe possible reactions to the courses that were offered.

Examine each statement and say whether it was usually, somtimes, seldom, or never true by checking the appropriate blank.

	• • • • • • • • • • • • • • • • • • • •	Usually True	Spmetimes True	Seldom Tru e	Never True	No Response
(a)	The Program was largely directed			-,		
*	to graduate students seeking advanced degrees	<u>58.5</u>	(i <u>25.2</u>	9.9	5.0	1.6
(c)	The Program was largely directed to the problems of school teachers The lectures were over my head	$\frac{33.2}{1.4}$	43.4 23.8	20.0 . 38.9	$\frac{2.2}{33.0}$	1.2
(q)	Instructors "talked down" to participants in the ExTFP courses	3.2	20.8	30.3	43.3	2.7
	The lectures acquainted me with various approaches to the subject	49.6	38.9	9.7	1.1	8
(f)	The lectures were too filled with details or unrelated facts	4.4 .	36.5	46.3	11.5	1.3
(g)	The staff had little or no know- ledge of the practical problems of	3	11			
	school teachers	13.3	38.0	31.6	16.0	1.1
•			1 .			

41. How would you describe the staff members of your Program

(a) As to their accessibility

32.5	Always accessible
61.5	Usually, accessible
5.7,	Seldom accessible
	Never accessible
2	No response

(b)	As	to	their	hel	pfu	iness

44.2	Always helpful
50.7	Usual ly helpful
4.6	Seldom helpful
, .2	Never helpful
	No response

Did the Program build on the participants' backgrounds, or did it seem to give no consideration to their backgrounds?

15.5	Consistently built on participants' backgrounds
47.6	Usually built on participants' backgrounds *
23.8	Only rarely built on participants' backgrounds
12.5	Seemed to be unconcerned for participants' backgrounds
6	No response

43. Give your evaluation of the administration of various aspects of the Program you participated in by checking the appropriate blank after each aspect.

•		Excellent	Good	Fair Poor	Very Poor	Not No Provided Response

7.4 Please list colleges or universities from which you received degrees

Doctoral Degree

7a. If the opportunity presents itself, do you expect to go into full-time educational administration some day?

3 <i>.</i> 7	Definitely yes
7.5	Probably yes
7.5	Uncertain
39.6	Probably no
41.2	Definitely no
- 5	No response

8. Have you raught préviously in NDEA or NSF academic year or summer institutes?

34.8	Yes '
64.7	_No .
.5	No te sponse

No response ·

Please explain

52.4

9. If yes, how did your experience in the Experienced Teacher Fellowship Program compare with your experience in a summer or academic year institute?

9.6 Experienced Teacher Fellowship Program was superior
 7.5 Experienced Teacher Fellowship Program was somewhat better
 11.8 About the same
 3.2 Institute was somewhat better
 12.7 Institute was superior
 12.8 Have not taught in Institute previously

10. Please list your father's primary occupation during his working years.

11. Please indicate with as much accuracy as possible when you first decided to become a college teacher.

9.6 High school

6.4 First two years of college

21.9 Last two years of college

27.3 Early graduate school years

11.2 Late graduate school years

10.7 After graduate school

9.6 Never really decided, just "drifted" into college teaching

3.2 No response

21. Were there ways developed in the program whereby the participants could gain teaching experience and develop teaching skills?

65.2	Yes
11.2	N₀
17.6	Unsure
5.9	 No response

Please explain

22. How did the students in the Experienced Teacher Fellowship Program compare to regular *gradio students in your institution in the following areas?

(a) Intellection ability

.4.3	Decidedly superior to regular graduate students
19.8	Somewhat better than regular graduate students
455	About the same as regular graduate students
22.5	Somewhat less capable thon regular graduate stude

Decidedly inferior to our regular graduate students No response

(b) Industriousness

20.3	•	Decidedly superior to regular graduate students
40.1.		Somewhat better than regular graduate students
33.2		About the same as regutar graduate students
2°.1		Somewhat less capable than regular graduate students
.0 ·		Decidedly inferior to our regular graduate students
4.3		No response

(c) Seriousness of purpose

251	Decidedly superior to regular graduate students
44.2	Somewhat better than regular graduate students
26.7	About the same as regular graduate students
2.7	Somewhat less capable than regular graduate students
7.0_	Decidedly inferior to our regular graduate students
4.3	No response

(d) Commitment to the discipline

	Decidedly superior to regular graduate students
	Somewhat better than regular graduate students
A	About the same as regular grationte students
12.3	Somewhat less capable than regular graduate students
-1.6	Decidedly inferior to our regular graduate students
6.4 • *	No response

(e) Knowledge of discipline

9.1	Decidedly superior to regular graduate students
16.0	Somewhat better than regular graduate students
38.5,	About the same as regular graduate students
16.6	Somewhat less capable than regular graduate students
13.9	Decidedly inferior to our regular.graduate students
5.9	No response

(f) Ability to communicate

<i>-</i> 7.5	Decidedly superior to regular graduate students
32.1	Somewhat better than regular graduate students
44.9	About the same as regular graduate students 🕫 .
9.6.	Somewhat less capable than regular graduate students
2.7	Recidedly inferior to our regular graduate students

GENERAL COMMENTS

Only a few aspects of your experience as director of the Experienced Teacher Fellowship Program can be examined in a questionnaire of this sort. Therefore, in the space below we welcome your individual comments on the Program and its effects.

Appendix E. Experienced Teacher Fellowship Program Evaluation Teams

MATH AND SCIENCE

Earlham College, Richmond, Indiana

- SA *Harold K. Hughes, Chairman, Department of Physics' Indiana State University, Terre Haute, Indiana 47809
- TE Ralph Lefler, Department of Physics Purdue University, Lafayette, Indiana 47.906
- MT Robert N. White, Science Department Head
 Clarksville Jr., High School, Clarksville, Indiana 47131

Florida State University, Tallahassee, Florida

- SA *Houston T. Karnes, Math Dept., Louisiana State University Baton Rouge, Louisiana 70803
- TE William McKillip, Professor of Math Education, 121B Baldwin Hall College of Education, University of Georgia, Athens, Georgia 30601
- MT Mrs. Agnes Rickey, Supervisor of Mathematics County Board of Public Instruction, Miami, Florida

Michigan State University, East Lansing, Michigan

- SA Richard E. Hodges, Director, Elementary Teacher Education Program Graduate School of Education, University of Chicago 5835 S. Kimbark Avenue, Chicago, Illinois 60637
- TE *William Eller, School of Education, State University
 Buffalo, New York 14214
- MT Margaret Wittrig, Board of Education, Primary Consultant 346 Second Avenue, S. W., Cedar Rapids, Iowa 52404

The following abbreviations are used to identify the professional roles of team members:

SA'- Subject Area Specialist

TE'- Teacher Education Specialist &

MT - Master Teacher or other Supervisory Person

- Team Coordinator

HISTORY

Carnegie Institute of Technology, Pittsburgh, Pennsylvania

- SA *John M. Thompson, Department of History University of Indiana, Bloomington, Indiana
- TE Howard Reinstra, Department of History
 Calvin College, Grand Rapids, Michigan 49506
- MT Zeb Wright, Program Specialist, Social Studies
 West Virginia State Dept. of Education, State Capital Building Charleston, West Virginia 25305

Illinois State University, Normal, Illinois

- SA *Gilbert Fite, Department of History University of Oklahoma, Norman, Oklahoma
- TE Howard Reinstra (as listed above under Carnegie Tech.)
- MT Gary Baker, Committee on the Study of History ' Newberry **Libra**ry, Chicago, Illinois

University of Kansas, Lawrence, Kansas

- SA W. Burlie Brown, Tulane University New Orleans, Louisiana,
- TE Richard Brown, Chairman, Committee on the Study of History Newberry Library, Chicago, Illinois
- MT James Landing, Instructor in Geography, Elston Jr/Sr High School Detroit at Spring Street, Michigan City, Indiana 46360 •

SOCIAL STUDIES

Syracuse University, Syracuse, New York

- SA Saul B. Cohen, Director, Graduate School of Gaography Clark University, Worcester, Massachusetts 01610
- TE (sador Starr, History Department, City University of New York Queens Collège, Kissene Blvd., Flushing, New York 11367
- MT Philip Woodruff, Westport Public Schools, Westport, Connecticut

ENGUSH

University of Illinois, 'Urbana, Illinois

- SA *Norman C. Stageberg, Professor of English Iowa State College, Cedar Falls, Iowa
- TE Dean William Jenkins, School of Education
 University of Wisconsin, Milwaukee, Wisconsin
- MT Mrs. Esther Williams, Chairman, English Department .
 Wilmington High School, 300 Richardson Place, Wilmington, Ohio 45177

University of Nebraska, Lincoln, Nebraska

- SA Richard Braddock, Coordinator, Rhetoric Program University of Iowa, Iowa City, Iowa 52240
- TE *Norman C. Stageberg (as listed above under U. of Illinois)
- MT Mrs. Esther Williams (as listed above under U. of Illinois)

READING.

Indiana University, Bloomington, Indiana

- SA Nathan Blount, Research and Development Center 1404 Regent Street, University of Wisconsin, Madison, Wisconsin 53706
- JE *Naomi Chase, Assoc. Professor of Education, Elementary Department Burton Hall, School of Education, University of Minnesota Minneapolis, Minnesota 55455
- MT Mary Huber, Reading Teacher, Terre Haute Public Schools 1101 S. 13th Street) Terre Haute, Indiana

Sonoma State College, Rohnert Park, California

- SA *Carl Miller, Associate Professor of Education, Bakersfield Center of Fresno State College, 4021 Mt. Vernon Avenue, Bakersfield, California 93306
- TE-- Jordan B. Utsey, Associate Professor of Education, School of Education University of Oregon, Eugene, Oregon 94703
- MT Millard Black, Curriculum Consultant, Los Angeles City Schools 450 Grand Avenue, Los Angeles, California

TEACHING OF THE DISADVANTAGED

University of Alaska, College, Alaska

- SA Richard P. Longaker, Department of Political Science University of California, Los Angeles, California 90024
- TE *Matt Trippe, School of Education, University of Michigan Ann Arbor, Michigan
- MT Gretta Pruitt, Principal, Garfield Public School Pasadená School System, Pasadena, California

Illinois Jeachers College, Chicago-North, Chicago, Illinois

- SA *Matt Trippe (see above under U. of *Alaska)
- TE E. Boyd Shannon (Pasadena College) (Temp.: 1250 Fourth Street, S. W. Washington, D. C.)
- MT Marjorie Mayo, Principal, Abraham Lincoln School Kankakee, Illinois 60901

Temple University, Philadelphia, Pa.

- SA *Walter Crockett, Department of Psychology Clark University, Worcester, Massachusetts 01610
- TE Roy Edelfelt, Associate Secretary, National Committee on Teacher Education and Professional Standards, 1201 Sixteenth Street, N. W. Washington, D. C. 20036
- MT Mrs. Jean Kunz, Director of Nursery School/Kindergarten, College of Education-University of Maryland, College Park, Maryland 20742

Texas Western College, El Paso, Texas

- SA * Jacques Wilson, Our Lady of the Lake College, 411 S. W. 24th Street,
 San Antonio, Texas 78207
- TE Joseph Cardenas, St. Mary's University, San Antonio, Texas 78228
- MT Mrs Herlinda Garcia, Edinburg Public Schools, Edinburg, Texas

Richard Gordon, School of ducation Clark University, Worcester, Massachusetts 01610

COUNSELING AND GUIDANCE

University of Maryland, College/Park, Maryland

- SA Frederick J. Gaudet, Director, Laboratory of Psychological Studies
 Stevens Institute, Moboken, New Jersey
- TE *Joseph Young, School of Education, Harvard University Cambridge, Massachusetts
- MT Irving Zweilbelson, Senior Psychologist
 City School District, New Rochelle, New York 10810

University of Missouri, Golumbia, Missouri

- SA *Merle Ohlsen, Professor, Educational Psychology, 188 Education Building University of Illinois, Urbana, Illinois
- TE Donald L. Molder, Ph.D., Eastern Illinois University, Charleston, Illinois
- MT W. David Whiteside, Director Pupil Services, Arlington Heights Public School

University of Rochester, Rochester, New York

- SA *Buford Stefflre, Professor of Education
 Michigan State University, East Lansing, Michigan 48824
- TE Goldie Ruth Koback, Professor of Education, City College of New York Convent Avenue at 135th Street, New York, New York 19031
- MT George Leute, Guidance Counselor, Haverford Township Sr. High School Haverton, Pennsylvania 19083

ELEMENTARY EDUCATION

Fisk University, Nashville, Tennessee

- SA Twiley W. Barker, Department of Political Science, University of Illinois Chicago Circle, P. O. Box 4348, Chicago, Illinois 60680
- TE *Dean Jerome Sachs, Illinois Teachers College Chicago-North, Chicago, Illinois
- MT Lewis J. Hilliard, Principal, Edison School 521 E. Perkins Avenue, Mt. Vernon, Illinois 62468

University of Missouri, Kansas City, Missouri

- SA Twiley W. Barker (see above under Fisk University)
- TE *Dean Jerome Sachs (see above under Fisk University)
- MT Lewis J. Hilliard (see above under Fisk University)

Teachers College, Collembia University, New York, New York

- SA Edward Bantel, School of Education, Psychology Department Wayne State University, Detroit, Michigan
- TE *Roy Edelfelt (see above under Temple University)
- MT Mrs. Jean Kunz (see above under Temple University)

MODERN FOREIGN LANGUAGES

University of Indiana, Bloomington, Indiana

- SA *Norman P. Sacks, Professor, Spanish and Portugues University of Wisconsin, Madison, Wisconsin 53706
- TE Miss Marianne Ciotti, Candidate for Ph.D. in Foreign Language Education 1634 Neil Avenue, Room 433, Neil Hall, Ohio State University Columbus, Ohio 43210
- MT Anthony Gradisnik, Milwaukee Public Schools 5225 W. Vlict Street, Milwaukee, Wisconsin 53208

University of Washington, Seattle, Washington

- SA F. W. Strothman, Professor of German, Executive Head, Department of Modern European Languages, Stanford University, Stanford California
- TE *Joseph E. Axelrod, Coordinator Experimental Freshman Year Program San Francisco, State College, 540 Powell Street San Francisco, California 94108
- MT Helen Shelton, Supervisor Foreign Language Program, P. O. Box 527 State Office of Professional Instruction, Olympia, Washington 98501

ART AND MUSIC

Arizona State University, Tempe, Arizona

- A Ronald Silverman, Professor of Art Education, California State College 5151 State College, Los Angeles, California 90032
- TE *William Engbretson, School of Education, University of Denver Denver, Colorado 80210
- MT Mrs. Audrey Welch, Supervisor of Art, Glendale Unified School System 411 East Wilson Avenue, Glendale, California 91206

GEOGRAPHY

Ohio State University, Columbus, Ohio

- SA *Edwin N. Thomas, Research Director, Transportation Center Northwestern University, Evanston, Illinois
- TE Jewell Phelps, Professor of Geography
 George Peabody College, Nashville, Tennessee 37203
- MT James Landing (see details under University of Kansas)

TOregon College of Education, Monmouth: Oregon

- SA *George H. Kakuichi, Deportment of Geography, University of Washington Seattle, Washington 98105
- TE William Jones, Division of Education, Colifornia State College at Hayward 25800 Hillary Street, Hayward, California 94542
- MT Charles Moody, Consultant in Social Science, and Executive Secretary SSSSC and Coordinator of Fine Arts and Humanities Project, State Department of Education, 721 Capitol Mall, Sacramento, California 95814

EDUCATIONAL MEDIA

Chapman College, Orange, California

SA - *James W. Brown, Dean of Graduate Studies and Research, San Jose State College, San Jose, California

(Observer - Richard P. Longaker)

TE - Vernon S. Gerlach, Associate Professor, Classroom Learning Laboratory Arizona State University, Tempe, Arizona 85281

MT - Robert Gerletti, Director, Division of Educational Media, Los Angeles
County Schools, 155 W. Washington Blvd., Los Angeles, California 90015

SCHOOL LIBRARY

Columbia University, NewYork, New York

- SA Paul Masoner, Dean and Professor of Education, University of Pittsburgh Pittsburgh, Pennsylvania 15213
- TE = *Sara Fenwick, Graduate Library School
 University of Chicago, Chicago, Illinois
- MT Mrs. Nancy Walker, Supervisor, Library: Services, Anne Arundel County Schools

HEALTH EDUCATION

University of Oregon, Eugene, Oregon

Appendix F. Responses to Visitors Evaluation Form

1. Is the Experienced Teacher Pellowship Program having an impact on the ongoing teacher education program of the institution?

· 2	8,			, 3		0
No	•		• 0		• •	Very Impressive
Impact	´ · ·	• •	,		•	Impact

General comments: Is there evidence that the Experienced Teacher Fellowship Program is strengthening teacher education? How did you gather your information? Can you be specific?

2. All programs, in their proposals, maintained that imagination and innovation would be important aspects of their programs. Is there such imagination and innovation in action?

0 4	· <u>.8</u> · <u>7</u>	<u>·11 ' , 1 ' </u>	• • 0
No imagination			Great deal of
or innovation	• •	· · · · · · · · · · · · · · · · · · ·	imagination
• • • • • •	,		 and innovation

General comments: What are the imaginative and innovative elements? Who was responsible for them? Are they working? Are they operational and reproducible? What is the single most innovative aspect of the program? What is the least innovative?

3. Are subject matter and teacher education departments working together?

. 5	5	. <u>5</u> , .	<u> </u>	10 •	2 .	<u>' 1 · . /</u>
Not at		•	•	•		Very close
all			•	•		cooperation

General comments: How are the subject matter and education departments cooperating? In program development, seminar programs, course development, etc.? Is the program truly integrated? Should it be?

Numbers in the blanks indicate the number of evaluation teams who checked each alternative. In the actual version of this form, each question was on a different page in order to leave space for extensive comments.

4. All of the programs indicate cooperation with local and other school districts.

How extensive are the relationships between colleges (and universities) and cooperating school districts?

No Selationship Telationship

General comments: What is the nature of the cooperation? What seems to be the reason for lack of cooperation? Is there supervision of teachers? Integration of seminars, joint programs?

5. Did the institution receive a grant under the Institutional Grants Program?

22 . Yes 9 No

Please discuss any information you have that such funds were used to improve and strengthen the normal ongoing teacher training program.

6. How adequate were the institution's facility to the scope and purposes of the Program?

7 3 7 8 3 2 0
Altogether Clearly inadequate

General comments: Were the classrooms, library, educational media, and other facilities adequate to the Program?

7. Sometimes a program in operation operates substantially as it was envisioned in the proposal, sometimes there are major deviations from the proposal. To what extent did this Program conform to the outlines of the proposal?

Almost exactly

5 10 8 5 2 0 0 Extreme deviation

General comments: Were the deviaitions, such as they were, sensible and beneficial or harmful and ill-considered? Or should there have been greater flexibility in the Program

One evaluation teams did no respond to this item.

Too light		٠.			About	•	,	_	, ———		· Too heavy
-			. ~		right		• *			•	

General comments:

15. How effectively was the initial process of selecting participants carried out?

· 4	10.	8 ."	5 .	3	1 .	 0 .
Extremely						Generally
effective	•	•		• , .		ineffective

General comments: How carefully was the selection procedure carried out? Was there an attempt to find participants who would be uniquely suited to the Program? If so, was this attempt successful?

16. Has the Program taken account of and advantage of the rich experience and prior preparation of the experienced teachers?

1 8 7 5 7 1 2

Not Yes,
at all definitely

General comments: There is some information which indicates that several programs have not taken account of the experience of the participants. Is this the case? What are the clue to this judgment? Were there changes made to remedy the situation?

What are the constructive features of the Program which capitalize upon the experience and preparation of the participants?

17. Unlike conventional graduate programs, the Experienced Teacher Fellowship Program is based upon a block or group program approach. The intent is to use the group to enhance fearning by building morale and esprit de corps. Has this been successful?

1 1 1 3 5 8 12

Not at all successful

General comments: In your opinion, has the Program produced greater benefits for subject mafter teaching competence than the conventional type of program? Has the group become widely separated from other graduate students? Has friction developed?

18. Were the relations of the participants to regular graduate students in the Department cordial or hostile?

6 4 6 12 0 0 - 0 Hostile

General comments: At what points did the relations between participants and graduate students seem most strained? Least strained? Would you say that the strength or weakness of the over-all graduate program contributed to or detracted from the effectiveness of the Program?

Three evaluation teams did not reply to this item:

Kingdom .

ABSTRACT

This pamphlet gives a trief description of the Council for Environmental Education history, purpose, activities, and structure. The five sections of this publication are: (1) Aims and Objectives of the Council; (2) Origins of the Council; (3) The Council's Structure and Membership; (4) Brief History of the Council; and (5) Present Activities of the Council for Environmental Education. The council's role is to serve as a liaison between member organizations to reduce duplication of effort and to function as an information service for environmental education. The council feels that environmental education should take an interdisciplinary approach so that teachers and pupils, regardless of ability, are able to benefit from the use of the environment as a medium for education, thus encouraging the development of respect and concern for the quality of the environment. (MR)

Reproductions supplied by EDRS are the best that can be made from the original document.

COUNCIL FOR ENVIRONMENTAL EDUCATION

COUNCIL FOR ENVIRONMENTAL EDUCATION at School of Education University of Reading London Road Reading RG1 5AQ

Tel: Reading 85234 ext 218

President: Rev. the Rt. Hon. Lord Sandford
Chairman: H. Patrick Shallard, OBE, MA
Consultant: Christopher Gayford, PhD, MEd,
MSc, MIBiol.

INFORMATION LEAFLET

- 1. Aims and Objectives of the Council
- 2. The Origins of the Council
- 3. The Council's Structure and Membership
- 4. Brief History of the Council
- 5. Present Activities

1. Aims and Objectives of the Council

The Council was formed in 1968 to provide a muchneeded forum for the interchange of ideas and advice
on the promotion of environmental education. Its
formation has enabled representatives from a large
number of organisations concerned with education or
environmental management to meet together at regular
intervals. Details of the Council's membership are
given in Section 3.

The Council's role is essentially that of a liaison body. It encourages communication between member organisations and others so that duplication of effort can be avoided and the various bodies working in this important and rapidly expanding field can benefit from the experience and advice of others. Individuals interested or involved in environmental education can often be helped by the Council's Secretariat in its developing role as an Information Service for matters relating to environmental education. The Council also initaites projects from time to time to further these aims.

The Council is registered at the Department of Education and Science as an educational charity and exists on grants from the Department of the Environment, local education authorities and charitable bodies.

2. The origins of the Council.

In the years leading up to the European Conservation Year (1970) three conferences on the theme of "The Countryside in 1970" were held in this country. These conferences enabled representatives of a wide range of organisations concerned with countryside use and management to gather together to discuss the state of the British countryside as it was likely to be in 1970. At the second conference, recognition was given to the vital role which education had to play in promoting environmental awareness and consideration.

The working party set up by the Duke of Edinburgh's Standing Committee for the "Countryside in 1970" recommended that a Council to coordinate information on environmental education should be set up, and in 1968 the Council held its first meeting under the chairmanship of Sir Jack Longland, 'The Council's remit covers England and Wales, a separate Committee for Scotland having been set up at the same time.'

Although its formation followed the 'Countryside in 1970' conferences, the Council's field of interest is not limited to the rural environment, as it recognises that the urban and rural elements of the environment are inextricably linked and interdependent. Neither does the Council envisage environmental education as / being the prerogative of any one of the existing disciplines. It feels that an interdisciplinary approach should be attempted where possible, so that the teaching profession as a whole and all pupils, regardless of academic ability, are able to benefit from the use of the environment as a medium for education and are thereby encouraged to develop respect and concern for the quality of the environment.

3. The Council's Structure and Membership

Over 50 national organisations, including local authority, teachers' and other professional organisations and statutory authorities and voluntary bodies concerned with environmental management, are members of the Council, and observers from the Department of Education and Science, the Department of the Environment, the Welsh Education Office and the Schools Council also attend meetings. A detailed chart of the Council's membership is given at the end of this leaflet.

The full Council meets once a year, and members are kept informed of progress by a Newsletter ('REED' - see publications list) which is issued three times.

a year. In addition to the annual meeting of the Council, which has in recent years incorporated an Open Meeting/discussion session with invited speakers, the Council is able to organise conferences which allow fuller discussion of particular problems.

Much of the work of the Council is initiated by its two sub-committees. These are composed of representatives from selected member organisations and are concerned with Education and Resources respectively. 'Meetings of these committees often result in fruitful cooperation between member organisations which helps to avoid misunderstandings between the various interest groups. Each sub-Committee is empowered to set up Working Parties, composed of members of the Committee and other co-opted individuals, to study particular problems and make recommendations on their solutions. Subjects investigated by Working Parties of this kind include the use of maps in environmental education. including problems arising from the payment of royalties and copyright difficulties; ways in which teachers and youth leaders can be made more aware of their responsibilities when leading parties of fieldworkers; the career prospects of those who wish to find a job in, conservation/environmental management; and the provision of examinations in environmental education at school level, including an assessment of the environmental content of traditional subject syllabuses.

The Council's Executive Committee, composed of its officers and the Chairmen and elected representatives of the Committees, meets at intervals to oversee the general running of the Council and the Secretariat.

Membership of the Council is open to any national organisation with an interest in environmental education, provided the application for membership is approved by the Executive Committee. There are no membership fees, but each member organisation is expected to finance the activities of its elected representative(s). There is no individual membership of the Council, although any interested individual may subscribe to the Council's publications.

Brief History of the Council

Initially the Council operated on a purely voluntary basis, with minor expenses being met by the organisations concerned. Mr Philip Oswald, then Head of the Nature Conservancy,'s Education Advisory Section; was the Acting Secretary to the Council for its first two years and was responsible for carrying out a substantial mailing to schools and colleges during European Conservation Year. During ECY the Council was successful in obtaining a three year grant from the Ernest Cook Trust for the establishment of a Secretariat, and in September .1970, Mr C L Mellowes, formerly Director of Education for Northumberland, was appointed as part-time Secretary with Mr David Withrington as his Administrative Assistant. The Secretariat was housed in a small office in Z the London Headquarters of the National Council of Social Service.

The Council was registered with the Department of Education and Science as an educational charity, and the Secretariat entered into negotiations with the Carnegie UK Trust which resulted in a generous grant over three years being given to the Council. This provided funds for the appointment of a second administrative assistant, and two graduates, Carol Johnson, BSc, and Jacqui Smith, BSc, were appointed in December 1971, following the resignation of Mr Withrington, to carry out the day-to-day work of the Secretariat, and too ork on the three projects undertaken with the help of

this grant. These eventually resulted in the publication of DELTA, the revised version of the Directory of Centres, and Advice on the Production of a Resource Guide for Outdoor Studies, and in the setting up of the Council's information service.

In April 1973, following the death of Mr Mellowes, former HMI John Pullen was appointed as Secretary. Mr Pullen was largely responsible for initiating a successful appeal which secured support for the Council's work from a number of education authorities throughout England and Wales. It is hoped that this support will continue in the future so that the Council can expand its activities.

In August 1973, the Council's Secretariat moved its offices to the School of Education at Reading University, a move brought about by a desire to strengthen links with educationists and, through the School of Education's Advanced Diploma Course in Environmental Studies in Education, with experienced teachers interested in environmental education. Although formal links with the University exist - Professor Wilson of the School of Education is a member of the Council's Executive Committee, and Tessa Davey, Course Tutor of the Advanced Diploma Course (since replaced by Dr. C. Gayford), was appointed as Special Consultant to the Council - the Council still retains financial indepenence and its charitable status.

Soon after the move to Reading, Mr Pullen retired from his official position with the Council, although he maintained an interest in the Council's work until his death in 1977. Carol Johnson (now Mrs Carol Hemsworth) was promoted to the post of full-time Secretary, Jacqui Smith became Administrative Assistant, and a part-time secretarial assistant was employed to help with the work load.

In September 1975, Sir Jack Longland retired from his osition as Chairman of the Council, and Patrick

Shallard (ex-Chief Education Officer for Bedfordshire) was elected as the new Chairman. At the same time, Lord Sandford agreed to become President of the Council.

The Department of the Environment gave recognition to the importance of the Council's work in 1976, in the form of a grant to match the contributions from local authorities. Shortly after this, Mrs Hemsworth left the Council, and Miss Smith took her place as Secretary.

Present Activities

The third project funded by the Carnegie UK Trust involved the provision of information and materials for teachers and youth leaders who wish to ambark upon environmental studies projects. The Council; in common with many other organisations in this field, receives a great deal of correspondence from individuals and institutions, both from the UK and abroad, interested in some aspect of environmental education. In its central position as the coordinating body for so many organisations involved in environmental education, the Council and its Secretariat are well placed to act as a clearing house for enquiries relating to environmental education channelling enquirers to appropriate contacts and resources and providing a starting point for visitors to this country who wish to gain an overall picture of environmental education in the UK.

Using money provided by the Carnegie UK Trust and the grants from Local Education Authorities and the Department of the Environment, the Secretariat has produced several information leaflets (see publications list) and in January 1974 started a monthly Newsheet giving brief details of publications, courses, events and services relating to environmental education. The Newsheet is available on subscription, and is also circulated to all schools, colleges and centres covered

by those Local Education Authorities which are grantaiding the Council. The Council's quarterly Newsletter 'REED' is now also availabe on subscription to any interested individual as well as being sent free to the Chief Education Officers of contributing LEAs and to the 80+ members of the Council and its Committees.

The Council also arranges conferences on topics of importance in Environmental Education, or to improve liaison, as with a recent series of conferences for Information Officers of environmental organisations. It is also hoped to arrange regional conferences in conjunction with other organisations.

The Working Parties set up by the Council's Committees, are also active in producing information and publications. A Working Party on Careers for Environmentalists has recently produced a valuable bookler outlinging career possibilities for those interested in working in this field.

A chart showing membership of the Council for Environmental Education is given overleaf.
